

Lindab **Flexible ducting**

Product overview

For a better climate

Most of us spend the majority of our time indoors. Indoor climate is crucial to how we feel, how productive we are and if we stay healthy.

We at Lindab have therefore made it our most important objective to contribute to an indoor climate that improves

people's lives. We do this by developing energy-efficient ventilation solutions and durable building products. We also aim to contribute to a better climate for our planet by working in a way that is sustainable for both people and the environment.

Flexible ducting

Lindab's flexible ducting assortment is a complement to our [Lindab Safe](#) air duct system and should be used selectively when ridged duct is not possible or suitable. Lindab have chosen the sizes of the flexible ducts to fulfil EN 13180 adopted to Lindab Safe fittings for the best air tightness and usability. They will also fit outside ducts but with limited air tightness and fit.

Lindab's flexible ducting assortment is lightweight, easy to install and consists of all types of products. Standard flexible, semi-flex, flexible silencers, insulated flexible ducts as well as all accessories for connecting and installing the products.

lindQST – Lindab Quick Selection Tool

[lindQST](#) is an advanced web tool that makes the selection of our solutions quick and simple.

With lindQST all documentation is made available directly on the web. That means consultants, installers and architects always have access to the latest documentation, installation instructions and product images etc. lindQST is a unique online tool where you can simulate your room in the Indoor Climate Designer, keep track of your projects and share it with your business partners etc. lindQST provides a simple shortcut to Lindab's material and is a tool that speeds up and simplifies the daily work. All information is just a mouse-click away.

Technical data

Area of use:

- Last part between duct and plenum box if they are mounted at separate occasions and the position of the plenum box is not settled.
Be aware of extra pressure drop, compared to rigid duct system
- Insulate rigid duct when professional insulation is not possible.
Be aware of extra transmission sound, compared to insulated rigid duct system
- As silencer when rigid silencers are not possible.
Be aware of extra transmission sound, compared to insulated rigid duct system

Beware that the strength of flexible ducts is very limited and they have to be protected for damages.
Note also that air tightness is difficult to achieve if the ducts are not equipped with Lindab Safe spigots.

Flexible ducts are difficult to clean and have to be changed if they are polluted.
