1. OVERVIEW

1.1. Description

Fire dampers WK45 are devices for use in heating, ventilation and air-conditioning (HVAC) systems at fire boundaries to maintain compartmentation and protect means of escape in case of fire. They satisfy integrity, insulation and smoke leakage criteria for the declared time of fire resistance.

Tested and classed in accordance with EN 1366-2 and EN 13501-3 regulations with 500 Pa depression (300 Pa for installations with Weichschott sealing).

Studied and optimized for medium and big size ducts focusing on aeraulic and acoustical performance.

1.2. General characteristics

- Casing made from galvanized carbon steel.
- Intumescent sealing gasket.
- Opening/closing mechanism with IP42 protection box (IP54 for motorized version).
- 40 mm thick closing blade made with refractory material.
- Cold smoke air seal gasket
- Internal intumescent gasket for hot smoke seal.

1.3. European Standards applied

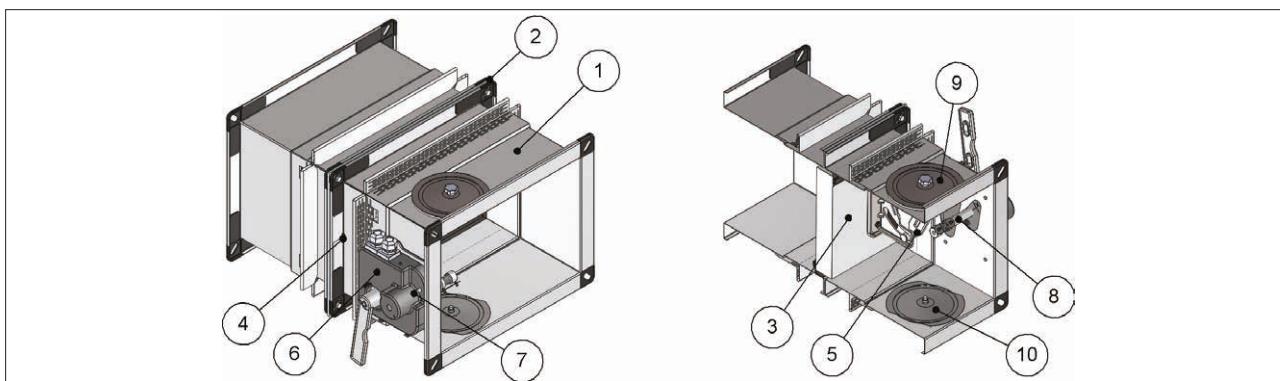

Test	EN 1366-2
Thermal fuse reliability	ISO 10294-4
Classification	EN 13501-3
Air Seal	EN 1751
Resistance to corrosive environments	EN 60068-2-52
CE certification	EN 15650

1.4. Certifications and approvals

CE Certificate of Constancy of Performance	n° 1812-CPR-1006	Efectis
NF certification *Refer to specification Notice Technique NF*	n° 28/01	AFNOR
VKF-AEAI Approval (Switzerland)	n° 23220	VKF-AEAI
RISE Approval (Sweden)	n° SC0185-16	RISE

1.5. Components

1. Casing made from 2 galvanized carbon steel ducts.
2. Mineral fiber gasket between the 2 fire damper casings.
3. Damper blade made from refracting material
4. Blade rotation axis, pivots housing.
5. Blade drive with crank and slotted link mechanism
6. Protection box
7. Manual closing device (Test button)
8. Temperature controlled closing device (thermal fuse)
9. OPTIONAL Inspection opening side "A"
10. OPTIONAL Inspection opening side "C"

1.6. Available dimensions

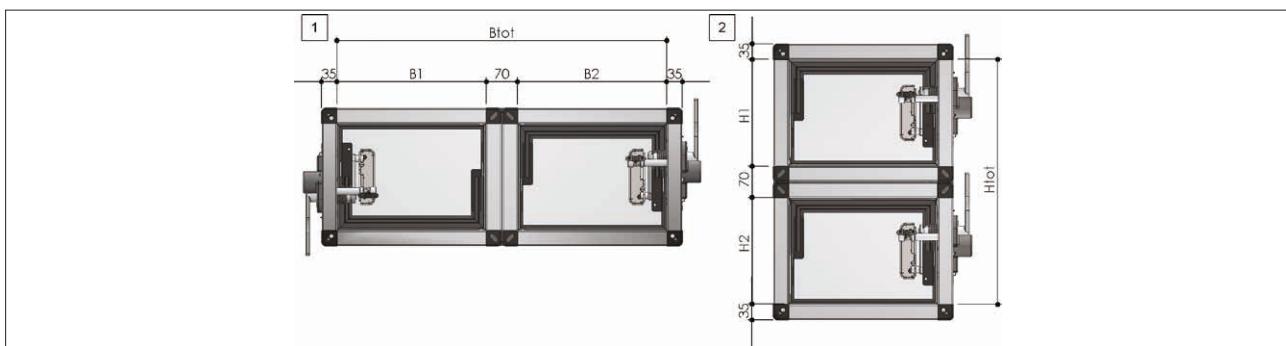

1.6.1. Single fire dampers

Fire dampers are available in all base-height combination indicated below, excluded sizes: 200x650, 200x700, 250x700, 200x750, 250x750, 300x750, 350x750, 200x800, 250x800, 300x800, 350x800.

Available height	mm	200	250	300	350	400	450	500	550	600	650	700	750	800
Available base	mm	200	250	300	350	400	450	500	550	600	650	700	750	800
Available base	mm	900	950	1000	1050	1100	1150	1200	1250	1300	1350	1400	1450	1500

1.6.2. Fire dampers pairing for big ducts dimensions

1. Side by side paired fire dampers
2. Vertically paired fire dampers

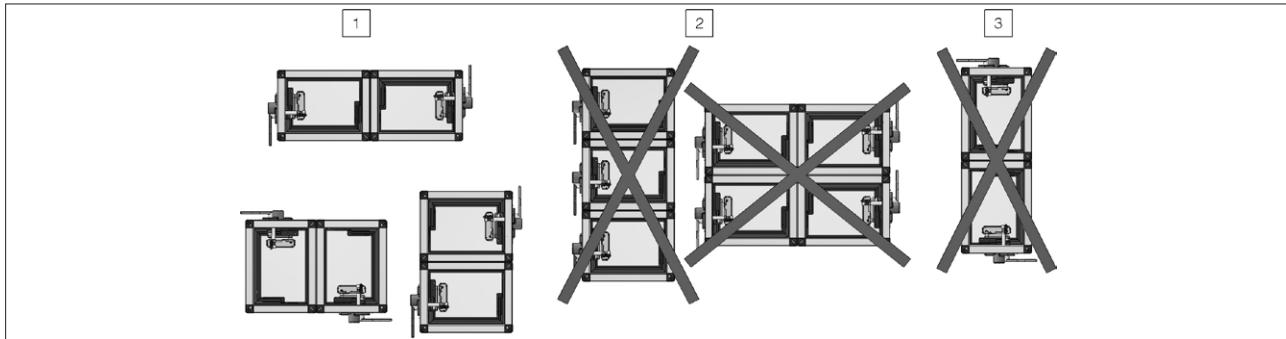

Side by side paired fire dampers

H1	mm	400	450	450	500	500	550	550	600	600	650	650	700	700	750
H2	mm	400	400	450	450	500	500	550	550	600	600	650	650	700	750

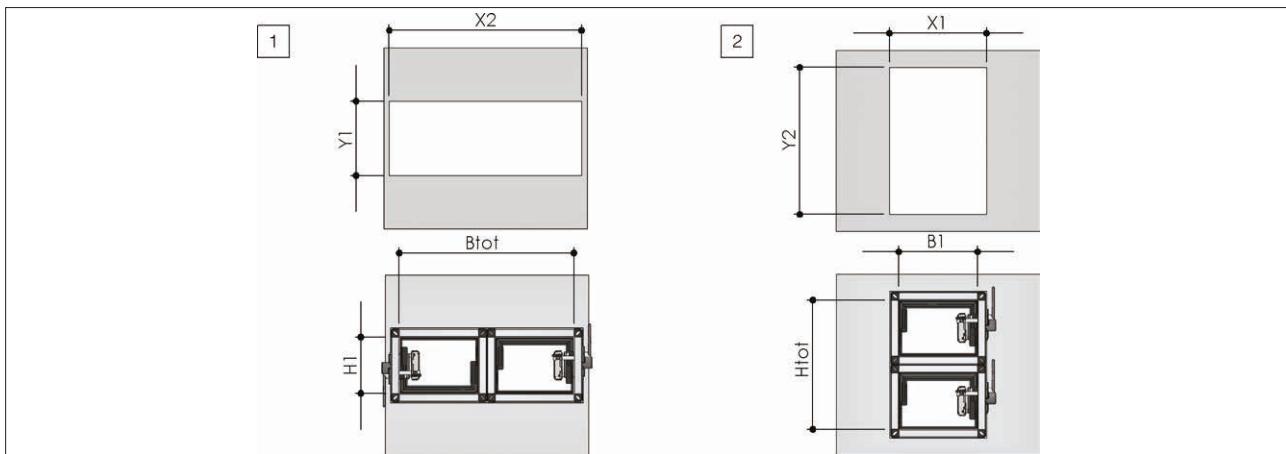

From the requested dimensions, it is possible to identify the closest effective achievable sizes.

1. It is allowed to pair two fire dampers. Maximum paired size: 1670x1500, 3070x800, 1500x1670.
2. It is forbidden to pair three or more fire dampers.
3. It is forbidden to vertically pair two fire dampers with vertical axis.

1.7. Paired fire dampers wall opening

1. Hole and installation for two fire dampers paired side by side with horizontal axis
2. Hole and installation for two fire dampers paired vertically with horizontal axis

1.8. Fire dampers pairing

The WK45 patented rectangular fire dampers can be paired side-by-side or vertically (not more than two) using the custom connection kit (see section Accessories and spare parts p. 47). Two insulating layers must be inserted between the two fire dampers.

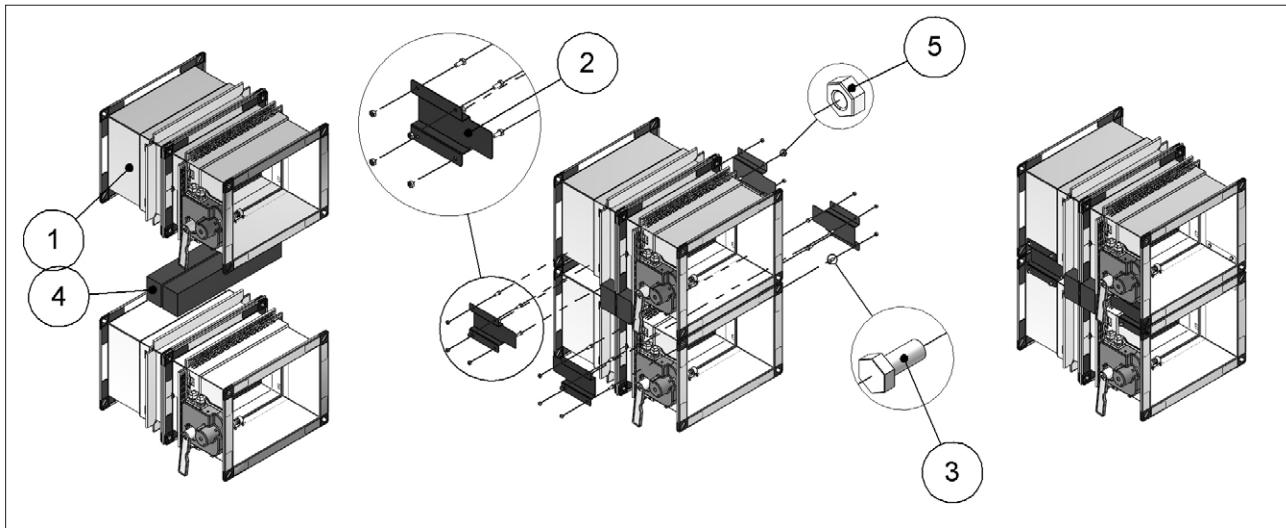

The pair of dampers, may be installed in vertical wall in the same way as a single damper.

1. WK45 Fire damper
2. Steel plate
3. Fixing screws
4. Rock wool strip 100 kg/m³ 80 x 65 x nominal fire damper height + 70 mm (not included in the connection kit WKBA2)
5. Rock wool strip 100 kg/m³ 80 x 65 x nominal fire damper height + 70 mm (not included in the connection kit WKBA2)
6. Nut

- It is forbidden to pair three or more fire dampers.

1. WK45 Fire damper
2. Steel plate
3. Fixing screws
4. Rock wool strip 100 kg/m³ 80 x 65 x nominal fire damper base + 70 mm (not included in the connection kit WKBA2)
5. Nut

- It is forbidden to pair three or more fire dampers.
- It is forbidden to vertically pair two fire dampers with vertical axis.

1.9. Performances

Performance	Reference standard	Class
Thermal fuse testing	ISO 10294-4	Compliant
Open and Close cycle reliability	EN 15650	Compliant
Resistance to corrosion in humid and saline environments	EN 60068-2-52	Degree of severity 2
Casing tightness	EN 1751	Class C
Blade seal	EN 1751	Class 2 minimum

1.11. Mechanism type

Mechanism type selection must be done according to national legislation and according to building type where fire damper will be installed. In particular it must be considered if fire alarm system or smoke detection system need specific control over the fire damper or if periodic controls (such as opening and closing) are required.

1.11.1. Manual / Manual with magnet

1. Manual opening lever
2. Protection box
3. Lever position when the blade is open
4. Lever position when the blade is closed
5. Magnet knob (for magnetic version)
6. Closed blade indicator
7. Open blade indicator
8. Manual closing button

Blade closing mode

Automatic closing with thermal fuse.

The control mechanism has a thermosensitive element that automatically closes the blade when the temperature in the duct exceeds 70°C (or 95°C for the fire damper with 95°C thermal fuse).

It is possible to close the damper by pressing the indicated button.

If the manual mechanism is equipped with electromagnet it is possible to remotely close the fire damper.

The manual command mechanism with magnet is equipped with an electromagnet which, in case power is interrupted (interruption magnet version) or when power is supplied (input magnet version), commands the closing of the damper.

Blade opening mode

Make sure that the damper is open before the ventilation system start-up, otherwise there is a risk of product malfunction.

In case of closed damper by pressing the closing button or remotely by electromagnet (magnetic version), it is possible to manually open the fire damper blade by rotating the lever antyclockwise.

For power supply interruption electromagnet, provide power supply and pull the magnet knob before opening the fire damper.

In case of closed damper as a result of the action of the thermosensitive element, it is possible to manually reopen the damper by rotating the lever counterclockwise once the element has been replaced.

Position indication microswitches

On request, the fire damper can be supplied with position microswitches (SA/SC/S2 optional) that signal the blade position (open or closed). Refer to Electrical connections p.32 paragraph for more details.

Closing by remote control

With power supply input or interruption magnet (WK45M version only).

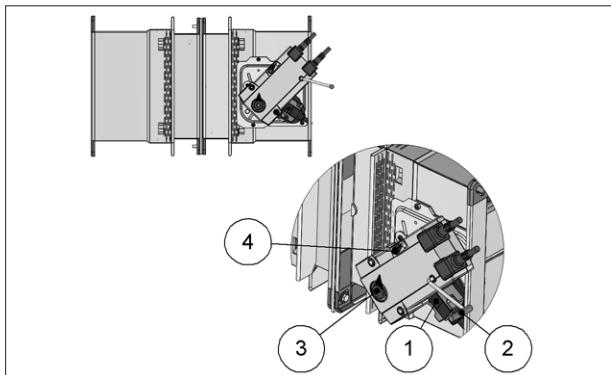

Temperature calibration of thermosensitive element for automatic damper closing

70 °C±7 °C (Standard)

95 °C±9 °C (On request).

1.11.2. Belimo motorized version

1. Manual closing switch
2. Manual opening lever
3. Position indicator
4. Blade locking lever

Blade closing mode

Automatic closing with thermal fuse.

The control mechanism has a thermosensitive element that automatically closes the blade when the temperature in the duct or in the room exceeds 72°C (or 95°C for the 95°C version).

To close the damper when the motor is connected, press the switch on the temperature sensor or cut off the power supply.

Blade opening mode

Make sure that the damper is open before the ventilation system start-up, otherwise there is a risk of product malfunction.

To open the damper with the electric motor driven actuator, provide power supply to the motor. Refer to the section Electrical connections p.32 for further information.

To manually open the damper, use the handle supplied and carefully rotate clockwise to the 90° indicator. To hold the damper in open position operate on the lever indicated in figure.

For VGB/DGB versions to hold the damper in open position, carefully rotate the handle counterclockwise.

During the manual opening of the damper, power must not be supplied to the motor.

Position indication microswitches

The motorized versions are supplied with two microswitches to show the blade's position (open or closed). Refer

to the section Electrical connections [p. 32](#) for further information.

Closing by remote control

If power to the motor is cut off, the blade will close.

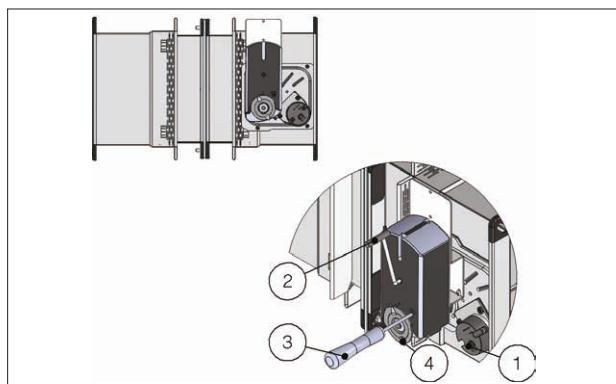

Temperature calibration of thermosensitive element for automatic damper closing

72 °C±7 °C (Standard)

95 °C±9 °C (On request).

1.11.3. Siemens motorized version

1. Manual closing switch
2. Manual opening lever
3. Screwdriver
4. Position indicator

Blade closing mode

Automatic closing with thermal fuse.

The control mechanism has a thermosensitive element that automatically closes the blade when the temperature in the duct or in the room exceeds 72°C (or 95°C for the 95°C version).

To close the damper when the motor is connected, press the switch on the temperature sensor or cut off the power supply.

Blade opening mode

Make sure that the damper is open before the ventilation system start-up, otherwise there is a risk of product malfunction.

To open the damper with the electric motor driven actuator, provide power supply to the motor. Refer to the section Electrical connections [p. 32](#) for further information.

To manually open the damper, use the handle supplied and carefully rotate counterclockwise to the 90 °C indicator. To hold the damper in open position, rotate the screw anticlockwise as shown in the picture.

During the manual opening of the damper, power must not be supplied to the motor.

Position indication microswitches

The motorized versions are supplied with two microswitches to show the blade's position (open or closed). Refer to the section Electrical connections [p. 32](#) for further information.

Closing by remote control

If power to the motor is cut off, the blade will close.

Temperature calibration of thermosensitive element for automatic damper closing

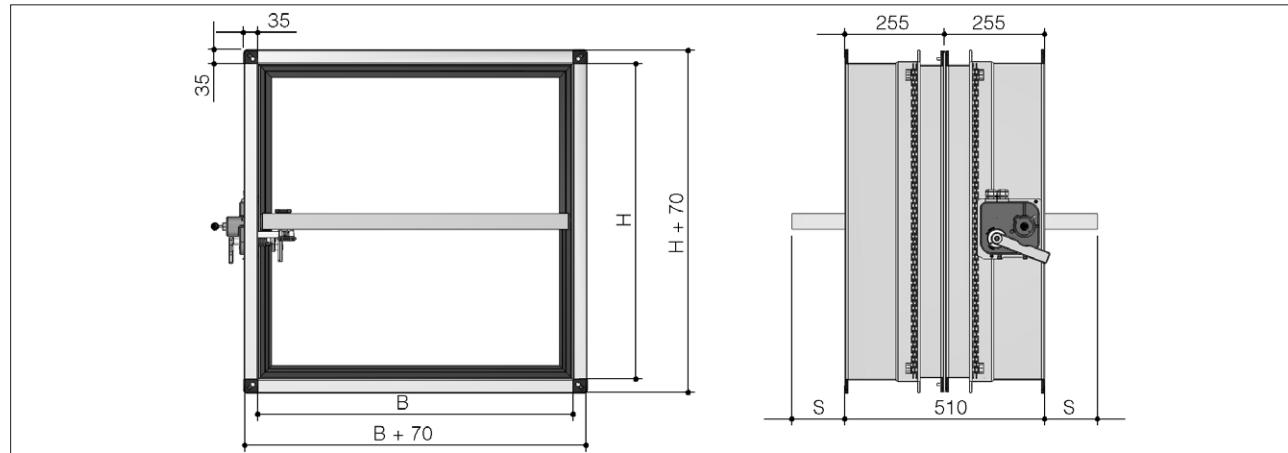

72 °C±7 °C (Standard)

95 °C±9 °C (On request).

Manual version. Motorized version: +1 kg

3. INSTALLATION

The sizes shown are in mm.

It is recommended to perform a functional test before Installation to exclude possible damage during transport and another test immediately after installation to exclude accidental damage to the product and interference with mounting components.

3.1. Intended use

The MP3 fire dampers are "Devices for use in heating, ventilation and air conditioning (HVAC) systems at fire boundaries to maintain compartmentation and protect means of escape in case of fire" according to the 3.1 paragraph of EN 15650:2010 standard.

It is compulsory to install the fire damper according to the instructions indicated in the technical data sheet and manual to maintain the declared performances and, in particular, the fire classes.

The double test (with the mechanism inside and outside the fire area) demonstrated that there is no preferred direction for the position of the damper, both in relation to air flow and the side with the higher probability of exposure to fire, as indicated in standard EN1366-2:2015 (paragraph 6.2).

Use permitted in any civil and industrial building.

Use permitted in saline atmosphere, for example:

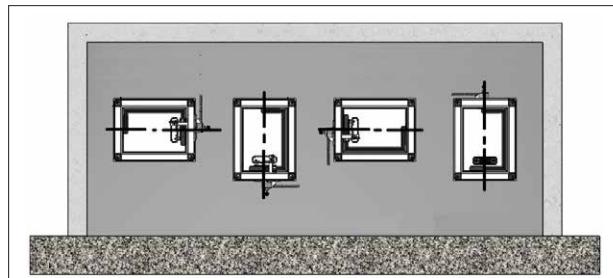

- maritime and port environments;
- fish markets;
- slaughterhouses;
- cheese makers.

3.2. Not allowed uses

- Use with installations different to those described in the technical data sheet and manual;
- use as smoke control damper;
- use as shut off damper;
- use in external environments without adequate protection from atmospheric conditions;
- use in explosive environments;
- use on board of ships;
- use in cooker extraction hoods;
- use in pneumatic conveying systems of dust or corn;
- use in ventilation systems within locations subject to chemical contamination;
- use in non inspectable environments;
- installation in fire resistant false ceilings crossings;
- use in ventilation ducts where condensation can occur.

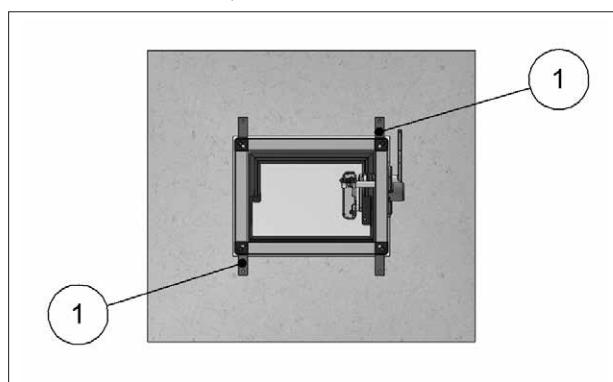

3.3. Blade rotation axis positioning

The fire damper can be installed both with the blade axis positioned vertically or horizontally.

3.4. Positioning brackets before fixing

1. WKGY100 fixing brackets (accessory to order separately, one size valid for all fire dampers kind)

WKGY100 fixing brackets are mandatory for vertical plasterboard wall installation with rock wool sealing.

They are not usable for installations with Fire Batt (Weichschott) sealing.

3.5. Installation of flexible connectors in order to balance out the ventilation ducts expansion

ATTENTION: the following indications must be considered binding only if legislation or local regulation where the fire dampers are installed require the use of flexible connectors.

Flexible connectors compensate any duct thermal expansion and wall bending in case of fire.

Flexible connectors are used to limit fire damper stresses due to external forces in case of fire and to preserve fire resistance class.

In general it is always appropriate the use of flexible connectors for the followings installations:

- light walls;
- Plasterboard and rock wool or Fire Batt (Weichschott) sealing;
- Applique fixing system.

Flexible connector must be normal flammability and in case of fire the grounding bonding should disconnect to guarantee the complete separation between fire damper and connected air duct.

When flexible connectors made of conductive material (e.g. aluminum) are used, no additional grounding bonding is required.

Despite flexible connector installation, the fire damper must be installed in the construction support so that its weight does not affect damper's installation position both during normal operation and in case of fire.

It is recommended not to compress flexible connectors in the installation phase.

Flexible connector must be at least 100mm long and in order that possible duct thermal expansions are balanced. Take care that the flexible connector does not interfere with opening / closing movement of the blade.

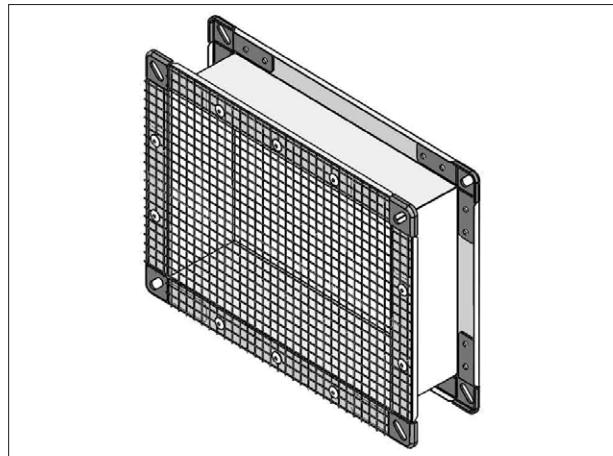

Refer to the section Technical data [p. 14](#) for blade exposition values.

3.6. Transfer Application (application not connected to air ducts on one or both sides)

Note: For this application please refer to national legislation to verify if any specific obligation is required.

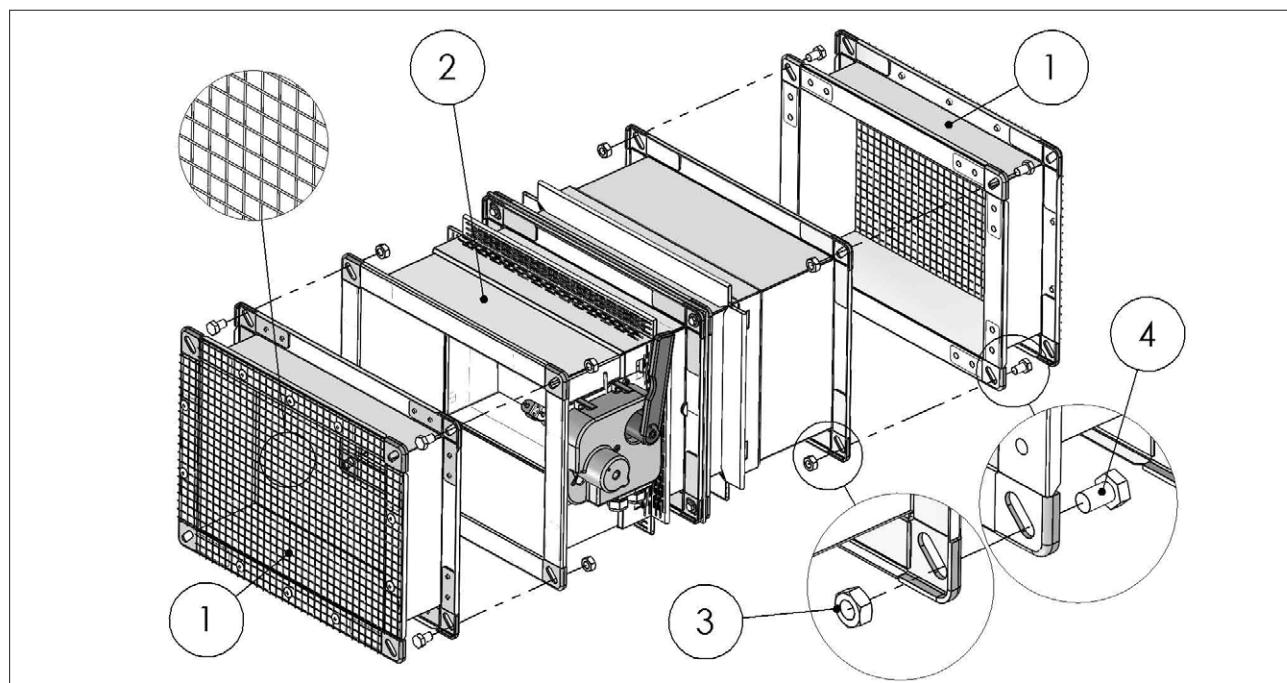

Following tests performed as per EN 1366-2, section 6.3.6 Standard, it is possible to install the fire damper free from air duct from one or both sides.

- Attention: fire resistance classification for transfer application is conform to section Fire resistance classification according to EN 13501-3-2009 [p. 9](#) limited to EI 120S if the ducted classification is higher.
- End cap with mesh shall be mounted on the side not connected to air duct.
- End cap with mesh is made from galvanized steel sheet and includes nuts and screws for fixing on fire damper.
- End cap with mesh is supplied not installed on the fire damper.
- Refer to the section How to order (transfer Application) [p. 18](#) for codes to use.

3.6.1. Components (Transfer Application)

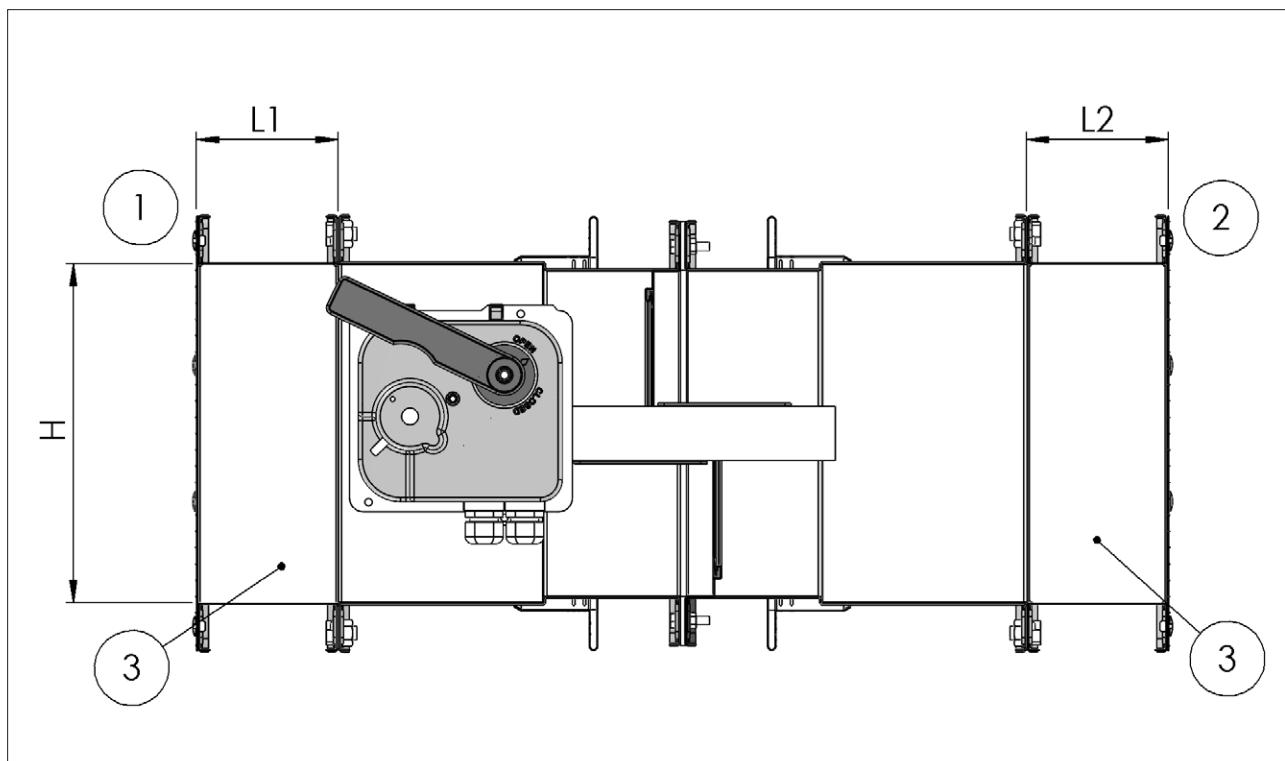

- | | |

3.6.3. How to order (transfer Application)

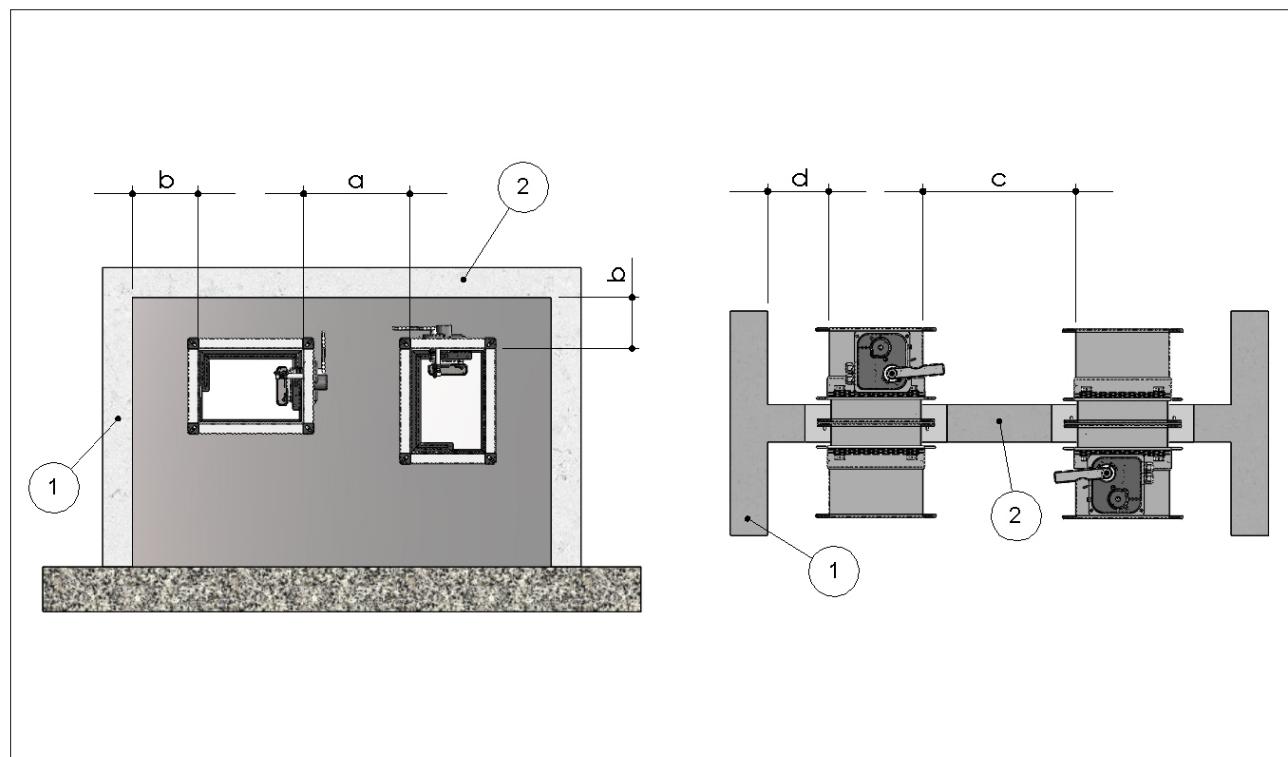

Type	FMWK005V	End cap with mesh with flange 35 mm
Base	XYZ	Nominal base dimension (mm)
Height	XYZ	Nominal height dimension (mm)
Length	XYZ	Length dimension (mm)
Examples		Code
End cap with mesh length 50 mm for fire damper 400x300 not connected to air ducts on 1 side		FMWK005V400-300-050
End cap with mesh length 50 mm for fire damper 800x600 not connected to air ducts on 1 side		FMWK005V800-600-050
End caps with mesh length 50 mm for fire damper 500x400 not connected to air ducts on both sides		FMWK005V500-400-050 (x2)

3.7. Minimum distances

It is recommended to keep enough space (about 200mm) for using or replacing the control mechanism or for maintenance. Also provide the necessary space to remove the ventilation duct from the damper whenever necessary.

Minimum distances

- 1. Side vertical wall
- 2. Floor
- a. Distance between fire dampers installed within vertical wall
- b. Distance between fire damper and vertical lateral wall / floor
- c. Distance between fire dampers installed within floor
- d. Distance between fire damper and vertical lateral wall

Installation	Fire dampers installed within vertical wall		Fire dampers installed within floor		Paired installation
	a [mm]	b [mm]	c [mm]	d [mm]	
Rigid wall	El 180 S Installation within vertical rigid wall p.23 Mortar sealing	70	75	-	-
	El 120 S Installation within vertical rigid wall p.23 Mortar or plaster putty sealing	70	75	-	-
	El 120 S Installation within vertical rigid wall p.23 Plasterboard and rock wool 100 kg/m ³ sealing	70	75	-	-
Flexible wall	El 120 S Installation within vertical light wall (plasterboard) p.25 Mortar or plaster putty sealing	70	75	-	-
	El 90 S Installation within vertical light wall (plasterboard) p.25 Plasterboard and rock wool 100 kg/m ³ sealing	70	75	-	-
	El 120 S Installation within vertical light wall (gypsum blocks wall) p.28 Plaster putty sealing	70	75	-	-
	El 90 S Installation within vertical light wall (gypsum blocks wall) p.28 Plaster putty sealing	200	75	-	No

	Fire dampers installed within vertical wall	Fire dampers installed within floor				
Installation	a [mm]	b [mm]	c [mm]	d [mm]	Paired installation	
Floor	EI 180 S Installation within floor p.29 Mortar sealing	-	-	70	75	Yes. Separate air duct
	EI 120 S Installation within floor p.29 Mortar sealing	-	-	70	75	Yes. Separate air duct
	EI 90 S Installation within floor p.29 Mortar sealing	-	-	70	75	Yes. Separate air duct

The minimum distance between two or more paired installations is 200 mm.
It is forbidden to pair three or more fire dampers.

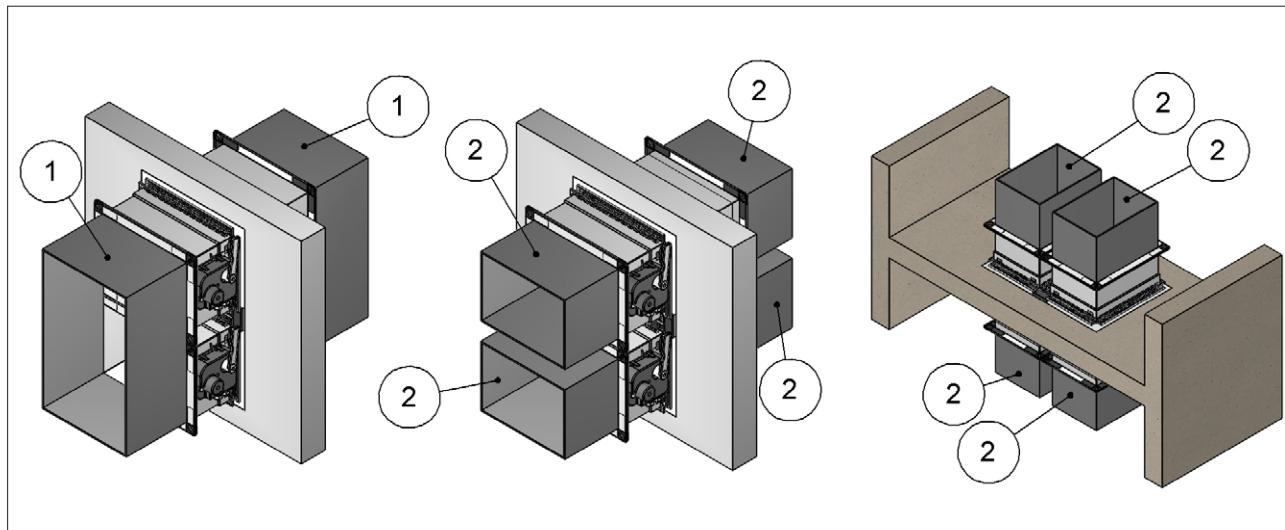

3.7.1. Fire Batt (Weichschott) sealings

	Fire dampers installed within vertical wall	Fire dampers installed within floor				
Installation	a [mm]	b [mm]	c [mm]	d [mm]	Paired installation	
Rigid wall	EI 90 S Installation within vertical rigid wall with Fire Batt (Weichschott) sealing p.30 Rock wool 140 kg/m ³ and endothermic varnish sealing	70	50	-	-	Yes. One air duct
	EI 90 S Installation within vertical light wall (plasterboard) with Fire Batt (Weichschott) sealing p.30 Rock Wool 140 kg/m ³ and endothermic varnish sealing	70	50	-	-	Yes. One air duct
Flexible wall	EI 90 S Installation within vertical light wall (gypsum blocks wall) with Fire Batt (Weichschott) sealing p.30 Rock Wool 140 kg/m ³ and endothermic varnish sealing	70	50	-	-	Yes. One air duct
	EI 120 S Installation within floor with Fire Batt (Weichschott) sealing p.31 Rock Wool 140 kg/m ³ and endothermic varnish sealing	-	-	200	75	No

The minimum distance between two or more paired installations is 200 mm.
It is forbidden to pair three or more fire dampers.

1. One air duct

2. Separate air ducts

3.8. Construction supports characteristics

The European standard for fire dampers foresees a precise correlation between the wall/floor characteristics and the fire resistance class obtained, as well as the correlation between wall/floor used for the test and wall/floor used for the actual installation.

The test results obtained on a type of wall/floor are valid also for walls/floor of the same type but with greater thickness and/or density than those used in the test.

For plasterboard walls, the test results are also valid for walls with a greater number of plasterboard layers on each side. As a result, the indicated thickness and density characteristics are to be considered as minimum values.

The wall/floor in which the fire dampers are installed must be fire class certified according to the standards foreseen for the structure.

3.8.1. Rigid walls

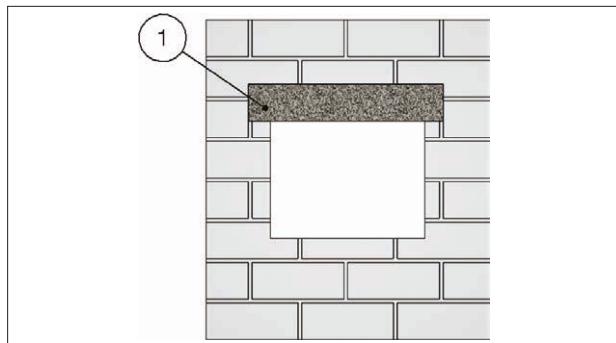

Can be made with aerated concrete blocks, poured concrete, concrete panels, perforated cell elements in concrete or brick in accordance with the following characteristics:

- minimum thickness 100 mm;
- minimum density 500 kg/m³.

The use of a reinforcing beam above the opening is recommended for walls made from concrete blocks, bricks or in concrete cell elements.

For walls built with perforated elements, it is also recommended that the area of the opening be made from full elements (for example aerated concrete blocks) to guarantee the correct adhesion of the mortar.

1. Reinforcing beam

3.8.2. Light plasterboard vertical walls

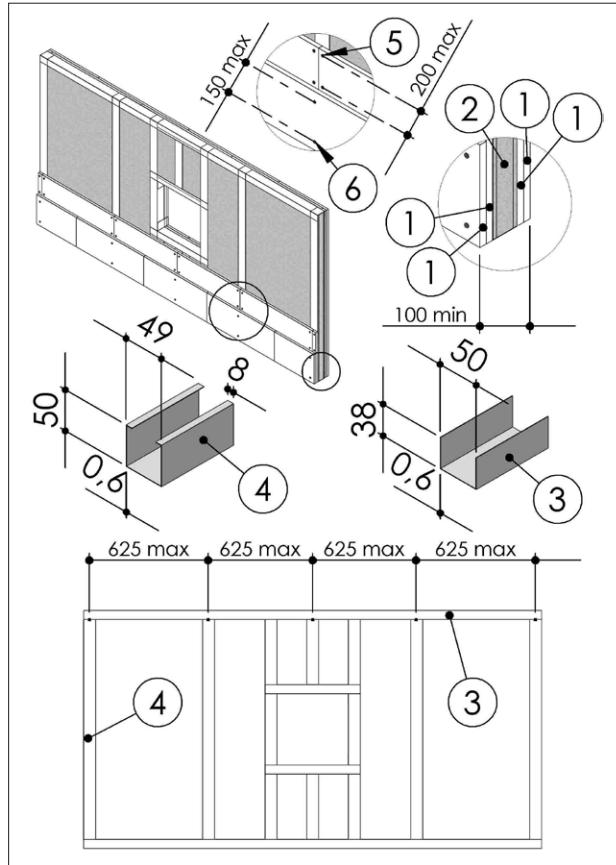

During testing, light plasterboard walls have been used with the following characteristics:

- U-shaped horizontal metal frame (50 mm) and C-shaped vertical frame (49 mm) made from 0,6 mm thick sheet metal;
- Vertical profiles placed with a maximum spacing of 625 mm between each other;
- Filling made of rock wool with density up to 100 kg/m³ (optional);
- Each side is made from two plasterboard layers 12,5 mm thick, unaligned to avoid alignment between the joints of the layer above and below.

The following indications are given for the installation walls:

- metal profiles minimum width: 49 mm;
- metal profiles minimum thickness: 0,6 mm;
- vertical profiles placed with a maximum spacing of 625 mm between each other;
- vertical profile fixing with selfthreading screws or by clinching to the bottom horizontal profile and insertion in the top horizontal profile;
- profiles fixed using self-threading screws or by clinching on every intersection.
- installation of a frame around the damper with base and height where shown in the installation instructions;
- Filling made of rock wool with density up to 100 kg/m³ (optional);
- each side is made from two plasterboard layers 12,5 mm minumum thick, unaligned to avoid alignment between the joints of the layer above and below.
- the front plasterboards layers are fixed using long enough screws to pass through the lower plasterboard and attach to the steel profile underneath.

1. Plasterboard thickness 12,5 mm
2. Rock wool density up to 80 kg/m³ (optional)
3. Horizontal U-shaped profile
4. Vertical C-shaped profile
5. Self-drilling screw Ø 3,5 X 25 mm
6. Self-drilling screw Ø 3,5 X 35 mm

3.8.3. Light plasterboard vertical walls with steel reinforcement

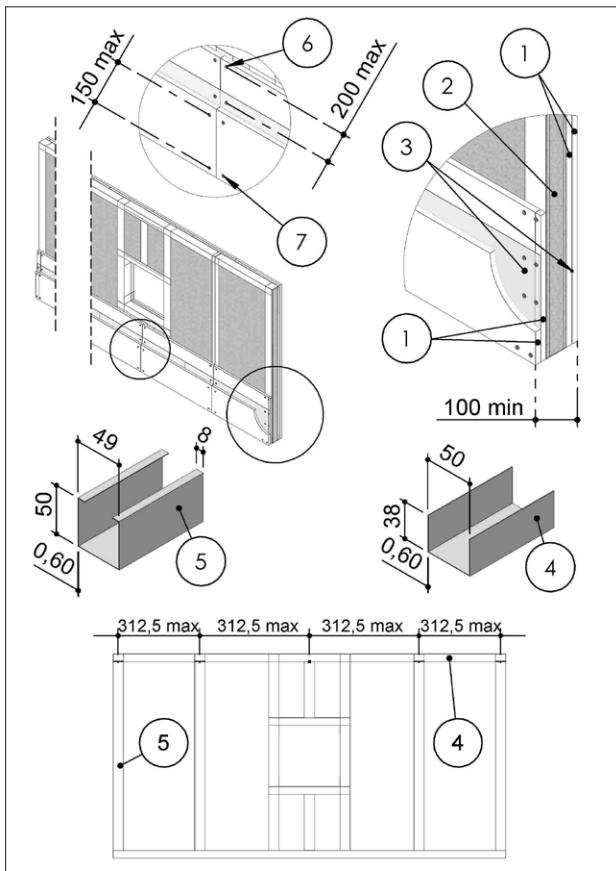

During testing, light plasterboard walls have been used with the following characteristics:

- U-shaped horizontal metal frame (50 mm) and C-shaped vertical frame (49 mm) made from 0,6 mm thick sheet metal;
- Vertical profiles placed with a maximum spacing of 312,5 mm between each other;
- reinforcement sheet;
- Filling made of rock wool with density up to 100 kg/m³ (optional);
- Each side is made from two plasterboard layers 12,5 mm thick, unaligned to avoid alignment between the joints of the layer above and below.

The following indications are given for the installation walls:

- metal profiles minimum width: 49 mm;
- metal profiles minimum thickness: 0,6 mm;
- vertical profiles placed with a maximum spacing of 312,5mm between each other;
- vertical profile fixing with selfthreading screws or by clinching to the bottom horizontal profile and insertion in the top horizontal profile;

- profiles fixed using self-threading screws or by clinching on every intersection.
 - installation of a frame around the damper with base and height where shown in the installation instructions;
 - Filling made of rock wool with density up to 100 kg/m³ (optional);
 - each side is made from two plasterboard layers 12,5 mm minimum thick, unaligned to avoid alignment between the joints of the layer above and below.
 - the front plasterboards layers are fixed using long enough screws to pass through the lower plasterboard and attach to the steel profile underneath.
1. Plasterboard thickness 12,5 mm
 2. Rock wool density up to 100 kg/m³ (optional)
 3. Reinforcement sheet
 4. Horizontal U-shaped profile
 5. Vertical C-shaped profile
 6. Self-drilling screw Ø 3,5 X 25 mm
 7. Self-drilling screw Ø 3,5 X 35 mm

3.8.4. Gypsum blocks light walls

Gypsum blocks wall can be built with special solid gypsum blocks with interlocking shaped edges as indicated in the supplier's instructions and according to the following characteristics:

- minimum thickness 70 or 100 mm according to the type and resistance class required;
- minimum density 995 kg/m³.

It is generally advisable to first build the wall and then provide the opening for the fire damper.

3.8.5. Aerated concrete floors

Aerated concrete floors can be built during installation or with preformed slabs with interlocking shaped edges according to the following characteristics:

- minimum thickness 100 or 150 mm according to the type and resistance class required;
- minimum density 650 kg/m³

3.8.6. Poured concrete floors

Poured concrete floors can be built during installation or with preformed slabs with interlocking shaped edges according to the following characteristics:

- minimum thickness 100 or 150 mm according to the resistance class required;
- minimum density 2200 kg/m³.

3.9. Installations within vertical rigid wall

Refer to the section Construction supports characteristics [p.20](#) for further information.

Comply with the minimum distances indicated on section Minimum distances [p.19](#).

Before and after installation please perform a functional test. Refer to section Mechanism type for further information [p.12](#).

3.9.1. Wall opening

A opening must be provided in the wall as indicated in the table and in the drawing

Fire resistance classification	Hole size "D1 x D2" [mm]	Damper protrusion from the wall "E" [mm]	Wall minimum thickness "S" [mm]	Sealing
EI 120 S Installation within vertical rigid wall				
Wall minimum density 500 kg/m ³	EI 120 S (500 Pa)	From (B+80) x (H+80) to (B+580) x (H+580)	205	100
EI 120 S Installation within vertical rigid wall				
Wall minimum density 500 kg/m ³	EI 120 S (500 Pa)	From (B+80) x (H+80) to (B+110) x (H+110)	205	100
EI 180 S Installation within vertical rigid wall				
Wall minimum density 500 kg/m ³	EI 180 S (500 Pa)	From (B+80) x (H+80) to (B+110) x (H+110)	185	140

B Nominal base of the damper

H Nominal height of the damper

3.9.2. Damper positioning

Position the damper in the opening so that the side of the closing mechanism extends as indicated in the table and in the drawing.

Close the blade before installing the fire damper.

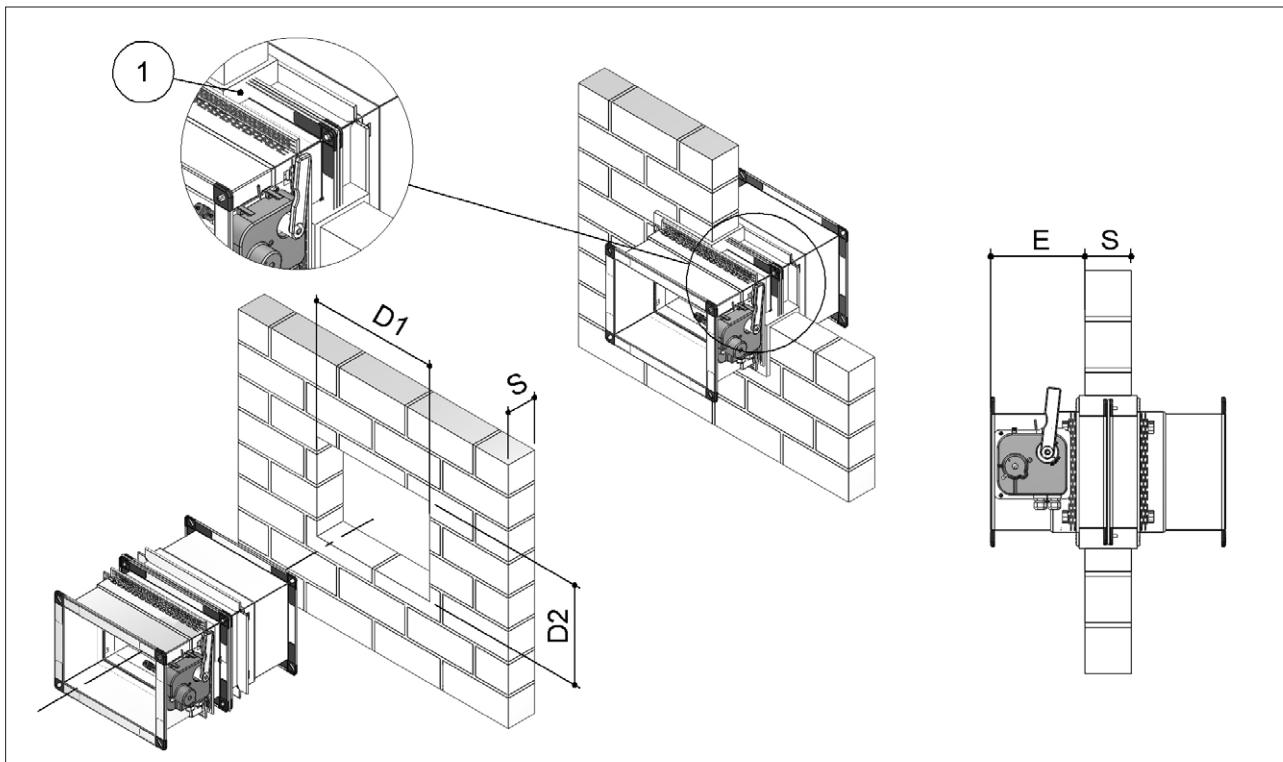

3.9.3. Filling

Fill the space between the wall and the damper as indicated in the table and in the drawing.

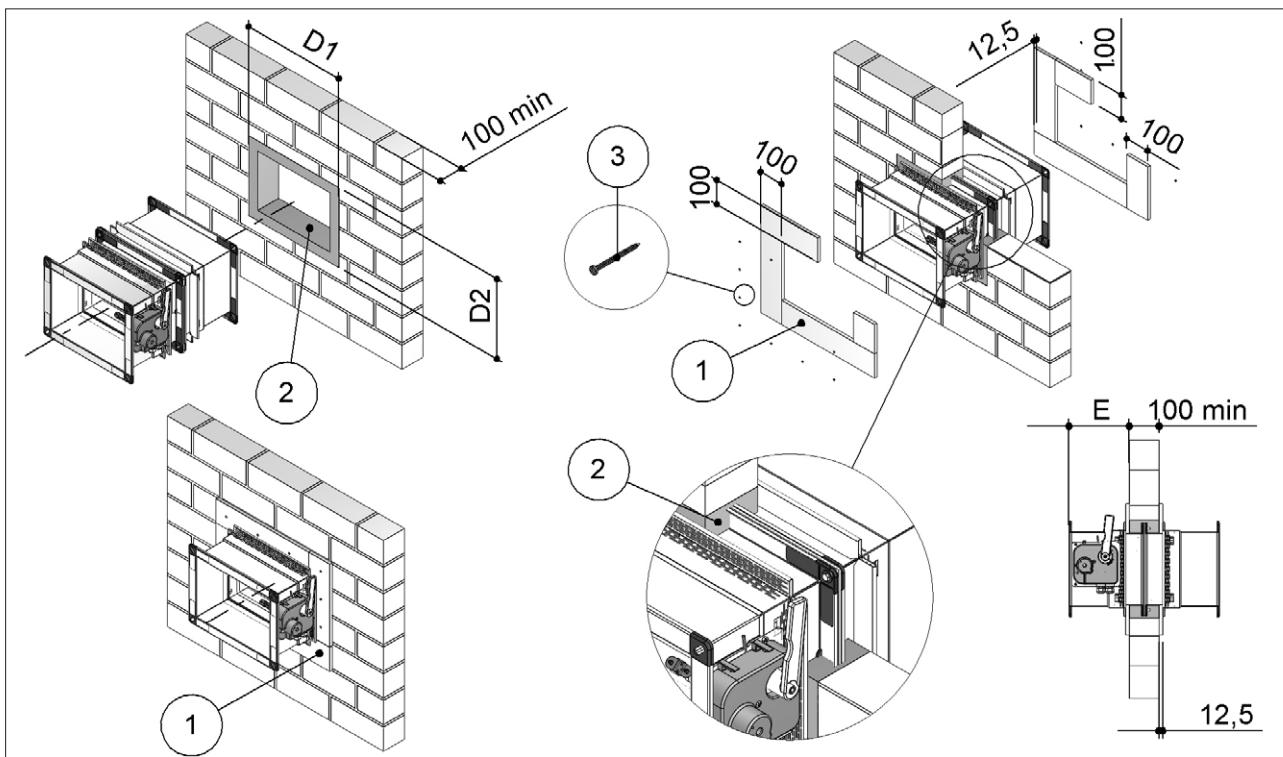

Sealing with concrete is not allowed.

EI 120 S / EI 180 S Installations within vertical rigid wall

1. Sealing indicated in the table
 D1 Hole base: see table above
 D2 Hole height: see table above
- E Damper protrusion from the wall: see table above
 S Wall minimum thickness: see table above

**EI 120S Installation within vertical rigid wall**

1. Plasterboard infill panel, thickness 12,5 mm, for rock wool sealing
 2. Rock wool, 100 kg/m³
 3. Self-drilling screw Ø 3,5 X 45 mm
- D1 Hole base: see table above
 D2 Hole height: see table above
 E Damper protrusion from the wall: see table above

3.10. Installations within vertical light wall (plasterboard)

Refer to the section Construction supports characteristics [p.20](#) for further information.

Comply with the minimum distances indicated on section Minimum distances [p.19](#).

Before and after installation please perform a functional test. Refer to section Mechanism type for further information [p.12](#).

3.10.1. Wall opening

A opening must be provided in the wall as indicated in the table and in the drawing

3.10.2. Damper positioning

Fix the four flaps code WKGY100 on the four corners of the fire damper (in correspondence to the longer screws) only for rock wool sealing. See section Accessories and spare parts [p.47](#) for further details.

Position the damper in the opening so that the side of the closing mechanism extends as indicated in the table and in the drawing.

Close the blade before installing the fire damper.

3.10.3. Filling

Fill the space between the wall and the damper as indicated in the table and in the drawing.

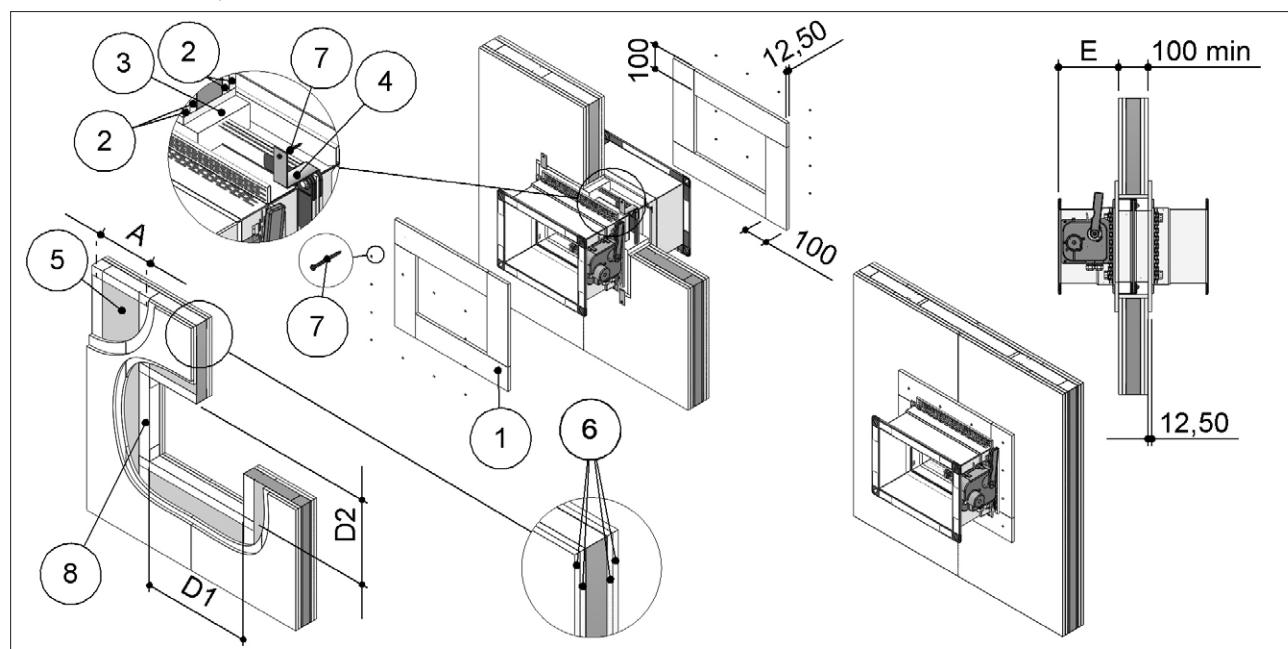

Sealing with concrete is not allowed.

Fire resistance classification	Hole size "D1 x D2" [mm]	Damper protrusion from the wall "E" [mm]	Wall minimum thickness "S" [mm]	Sealing
EI 90 S Installation within vertical light wall (plasterboard)

Wall minimum density 995 kg/m ³	EI 90 S (500 Pa)	From (B+80) x (H+80) to (B+110) x (H+110)	220	70	Plaster putty sealing
EI 120 S Installation within vertical light wall (gypsum blocks wall)					
Wall minimum density 995 kg/m ³	EI 120 S (500 Pa)	From (B+80) x (H+80) to (B+110) x (H+110)	205	100	Plaster putty sealing

B Nominal base of the damper
 H Nominal height of the damper

1. Plaster putty
 D1 Hole base: see table above
 D2 Hole height: see table above

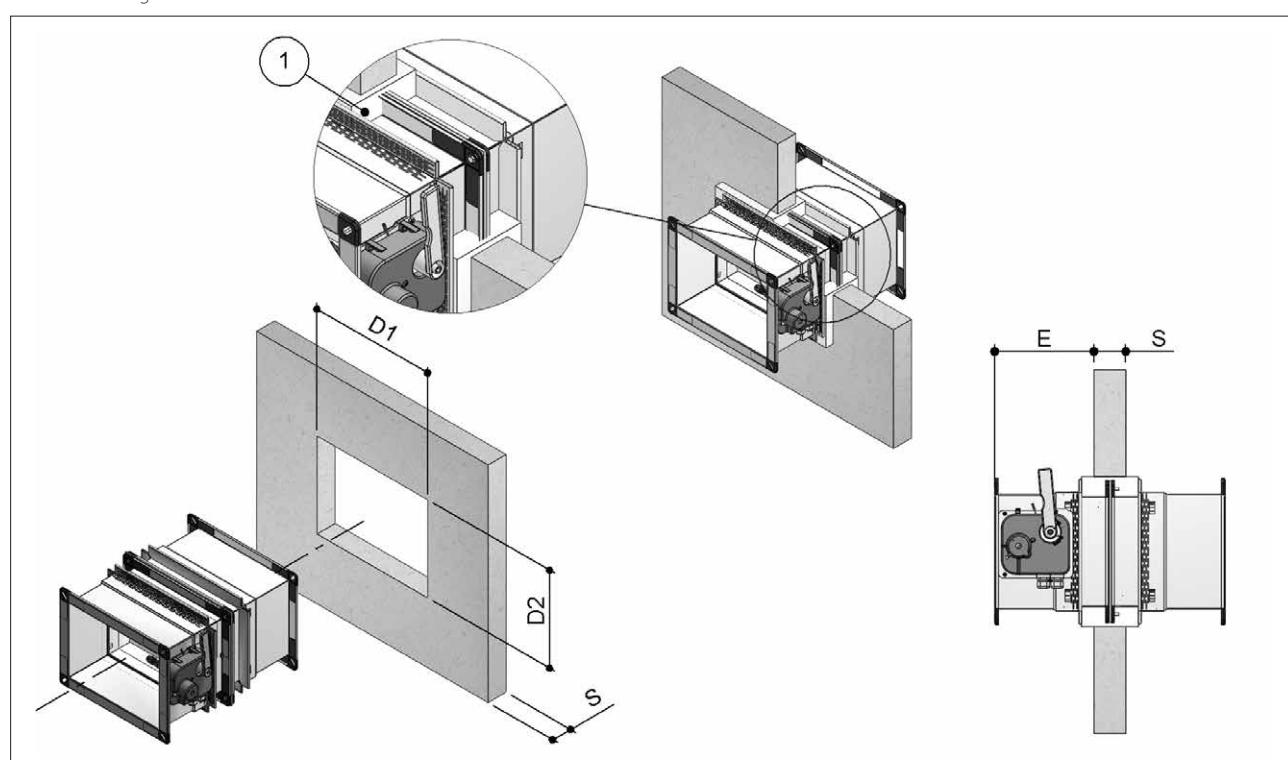

3.11.2. Damper positioning

Position the damper in the opening so that the side of the closing mechanism extends as indicated in the table and in the drawing.

Close the blade before installing the fire damper.

3.11.3. Filling

Fill the space between the wall and the damper as indicated in the table and in the drawing.
 Sealing with concrete is not allowed.

3.12. Installations within floor

Refer to the section Construction supports characteristics p.20 for further information.

Comply with the minimum distances indicated on section Minimum distances p.19.

Before and after installation please perform a functional test. Refer to section Mechanism type for further information p.12.

3.12.1. Floor opening

A opening must be provided in the floor as indicated in the table and in the drawing

	Fire resistance classification	Hole size "D1 x D2" [mm]	Damper protrusion from the wall "E" [mm]	Floor minimum thickness "S" [mm]	Sealing
EI 90 S Installation within floor					
Floor minimum density 650 kg/m ³	EI 90 S (500 Pa)	From (B+130) x (H+130) to (B+170) x (H+170)	193	100	Mortar sealing
EI 120 S Installation within floor					
Floor minimum density 650 kg/m ³	EI 120 S (500 Pa)	From (B+130) x (H+130) to (B+170) x (H+170)	193	150	Mortar sealing
EI 180 S Installation within floor					
Floor minimum density 2200 kg/m ³	EI 180 S (500 Pa)	From (B+130) x (H+130) to (B+170) x (H+170)	185	140	Mortar sealing

B Nominal base of the damper

H Nominal height of the damper

D1 Hole base: see table above

D2 Hole height: see table above

E Damper protrusion from the floor: see table above

3.12.2. Damper positioning

Position the damper in the opening so that the side of the closing mechanism extends as indicated in the table and in the drawing.

Close the blade before installing the fire damper.

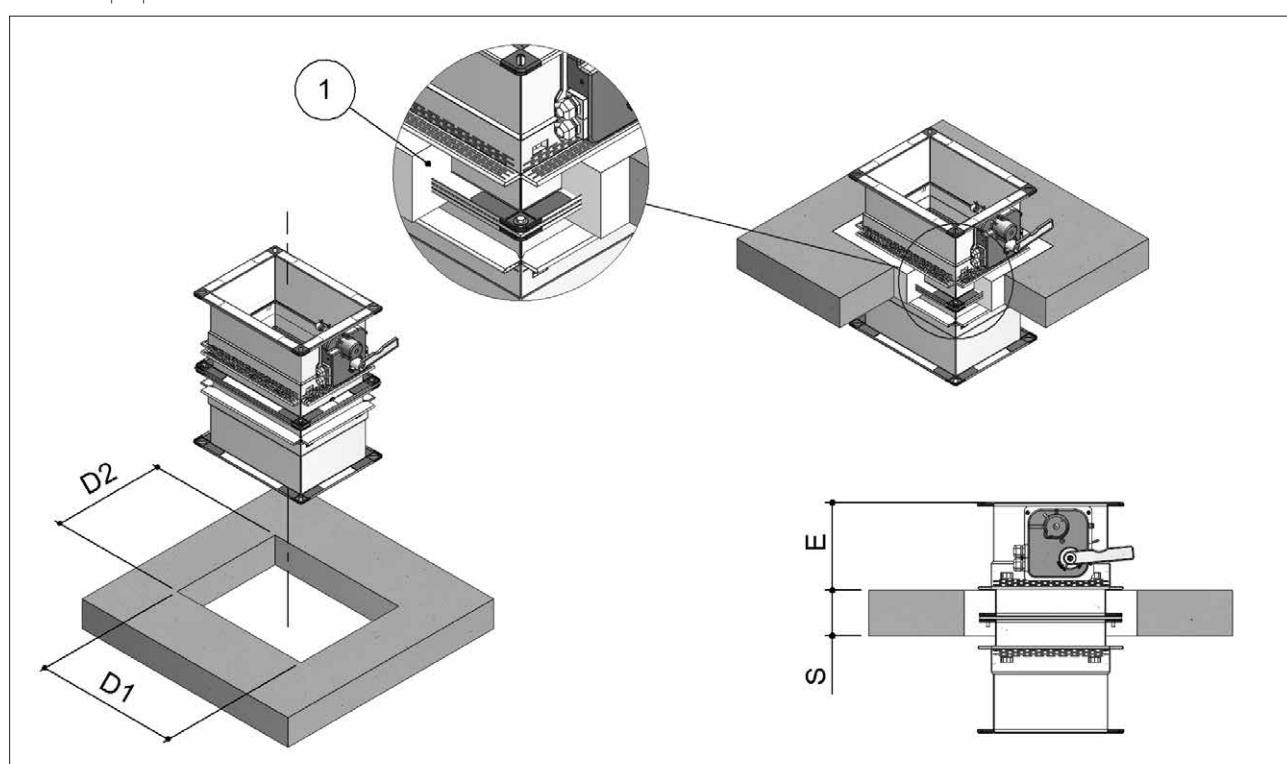

3.12.3. Filling

Fill the space between the floor and the damper as indicated in the table and in the drawing.

Sealing with concrete is not allowed.

S Floor minimum thickness: see table above

1. Mortar M-10, EN998-2

3.13. Installations within vertical wall with Fire Batt (Weichschott) sealing

Refer to the section Construction supports characteristics p.20 for further information.

Comply with the minimum distances indicated on section Minimum distances p.19.

Before and after installation please perform a functional test. Refer to section Mechanism type for further information p.12.

3.13.1. Wall opening

A opening must be provided in the wall as indicated in the table and in the drawing

3.13.2. Damper positioning

Position the damper in the opening so that the side of the closing mechanism extends as indicated in the table and in the drawing.

Close the blade before installing the fire damper.

3.13.3. Filling

Fill the space between the damper and the wall using Fire Batt (Weichschott) sealing made from two rock wool panels with minimum thickness of 50 mm and minimum density of 140 kg/m³.

The panels must be covered on both faces of the wall with endothermic varnish type PROMASTOP E PASTE or HILTI CFS-CT (minimum thickness of 1 mm) and with an internal perimeter sealant type PROMASTOP E PASTE or HILTI CFS-S ACR (minimum thickness of 1 mm).

	Fire resistance classification	Hole size "D1 x D2" [mm]	Damper protrusion from the wall "E" [mm]	Wall minimum thickness "S" [mm]	Sealing
Rigid wall					
	EI 90 S Installation within vertical rigid wall and Fire Batt (Weichschott) sealing				
	Wall minimum density 500 kg/m ³	EI 90 S (300 Pa)	(B+800 max) x (H+800 max)	205	100
					Rock wool 140 kg/m ³ and endothermic varnish sealing
Flexible wall					
	EI 90 S Installation within vertical light wall (plasterboard) with Fire Batt (Weichschott) sealing				
	Wall rock wool density up to 100 kg/m ³ (optional)	EI 90 S (300 Pa)	(B+800 max) x (H+800 max)	205	100
					Rockwool 140 kg/m ³ and endothermic varnish sealing
	EI 90 S Installation within vertical light wall (plasterboard) with Fire Batt (Weichschott) sealing				
	Wall minimum density 995 kg/m ³	EI 90 S (300 Pa)	(B+800 max) x (H+800 max)	205	100
					Rockwool 140 kg/m ³ and endothermic varnish sealing

B Nominal base of the damper

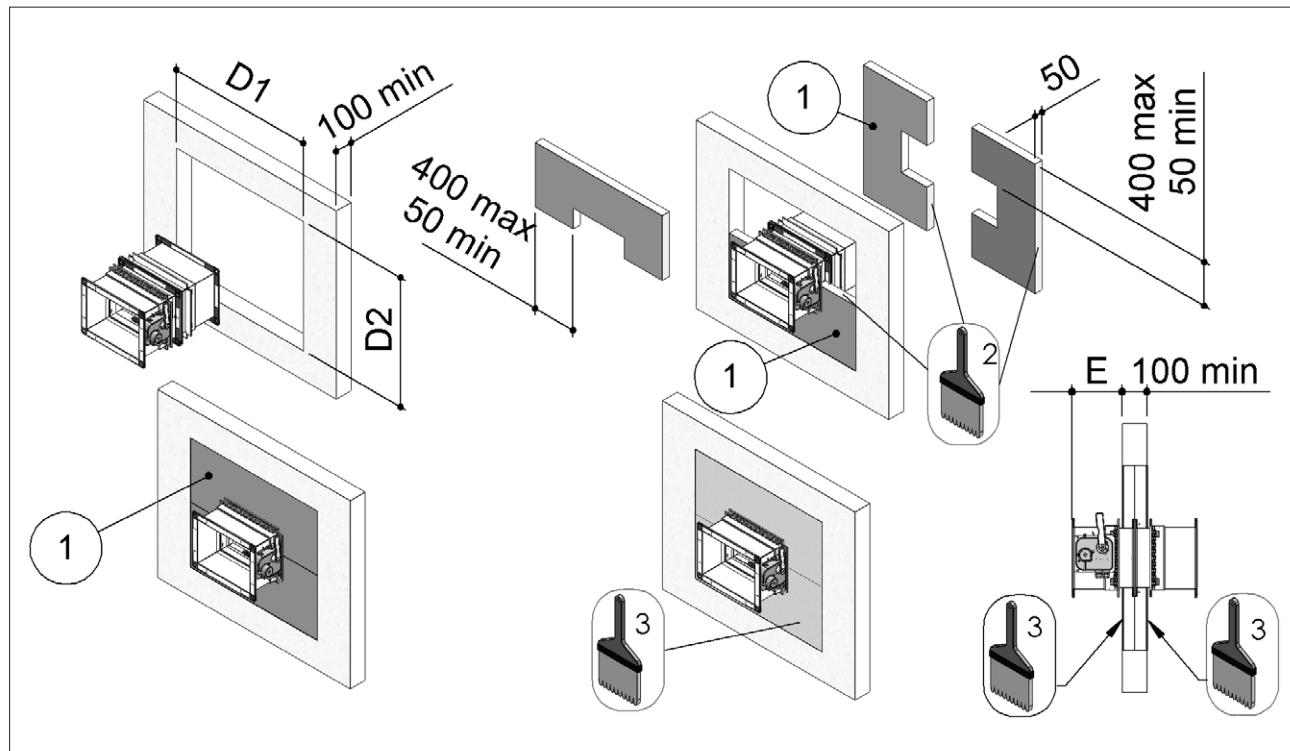

H Nominal height of the damper

D1 Hole base indicated in the table

D2 Hole height indicated in the table

E Damper protrusion from the wall indicated in the table

1. Rockwool panel 50 mm thick with 140 kg/m³ density.
2. PROMASTOP E PASTE or HILTI CFS-S ACR type sealant
3. PROMASTOP E PASTE or HILTI CFS-CT endothermic varnish

3.14. Installation within floor with Fire Batt (Weichschott) sealing

Refer to the section [p. 20](#) for further information.

Comply with the minimum distances indicated on section Minimum distances [p. 19](#).

Before and after installation please perform a functional test. Refer to section Mechanism type for further information [p. 12](#).

3.14.1. Floor opening

A opening must be provided in the floor as indicated in the table and in the drawing

3.14.2. Damper positioning

Position the damper in the opening so that the side of the closing mechanism extends as indicated in the table and in the drawing.

Close the blade before installing the fire damper.

3.14.3. Filling

Fill the space between the damper and the floor using Fire Batt (Weichschott) sealing made from two rock wool panels with minimum thickness of 50 mm and minimum density of 140 kg/m³.

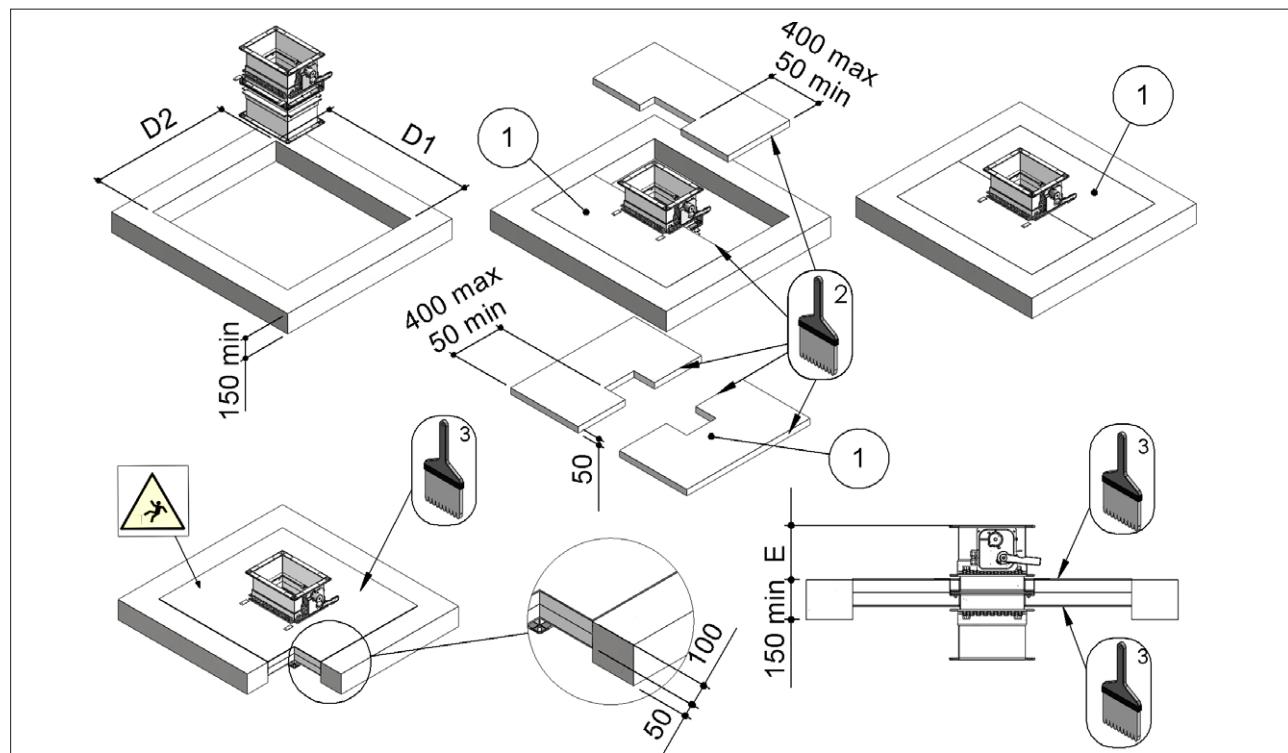

The panels must be covered on both faces of the wall with endothermic varnish type PROMASTOP E PASTE or HILTI CFS-CT (minimum thickness of 1 mm) and with an internal perimeter sealant type PROMASTOP E PASTE or HILTI CFS-S ACR (minimum thickness of 1 mm).

Fire resistance classification	Hole size "D1 x D2" [mm]	Damper protrusion from the wall "E" [mm]	Floor minimum thickness "S" [mm]	Sealing
EI 120 S Installation within floor and Fire Batt (Weichschott) sealing				
Floor minimum density 650 kg/m ³ (300 Pa)	EI 120 S (B+800 max) x (H+800 max)	205	150	Rock wool 140 kg/m ³ and endothermic varnish sealing

B Nominal base of the damper
H Nominal height of the damper

D1 Hole base: see table above
D2 Hole height: see table above
E Damper protrusion from the floor: see table above

1. Rock wool panel 50 mm thick with 140 kg/m³ density.
2. PROMASTOP E PASTE or HILTI CFS-S ACR type sealant
3. PROMASTOP E PASTE or HILTI CFS-CT endothermic varnish

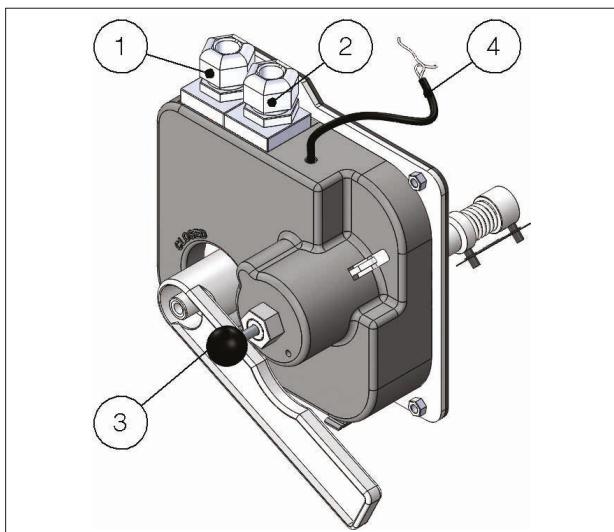

4. ELECTRICAL CONNECTIONS

4.1. Electrical wiring

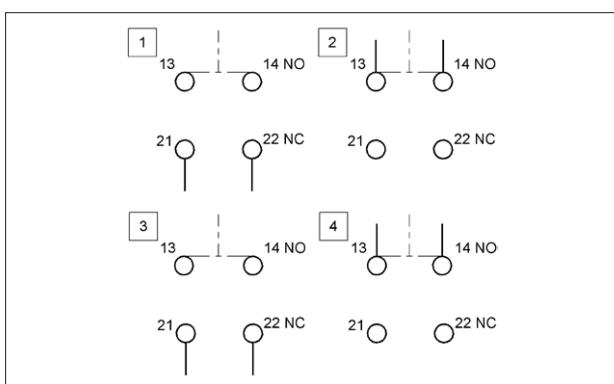

Electrical connections must be done by qualified and trained people.

Switch off the power supply before starting any work on the electric elements. Never switch on the power supply during electrical connections.

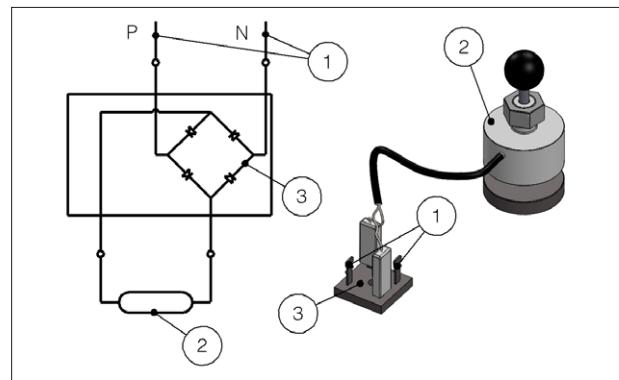

1. SC (closed damper) microswitch - on request
2. SA (open damper) microswitch - on request
3. Magnet - on request
4. Magnet cables for wiring

4.1.1. SC/SA microswitches position

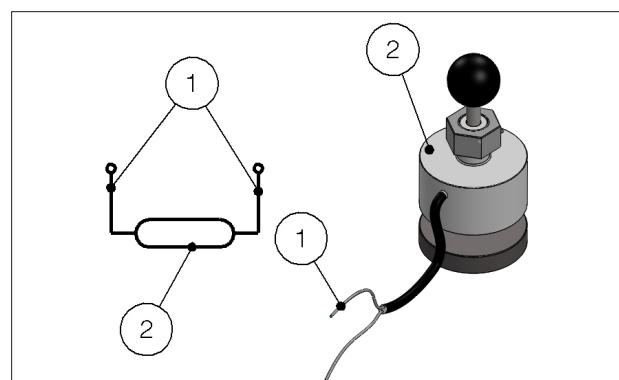

1. "NC" contact of SC microswitch. When the fire blade is closed the circuit is open.
2. "NO" contact of SC microswitch. When the fire blade is closed the circuit is closed.
3. "NC" contact of SA microswitch. When the fire blade is open the circuit is open.
4. "NO" contact of SA microswitch. When the fire blade is open the circuit is closed.

4.1.2. 230 V AC magnet wiring

1. 230 V AC power supply
2. Magnet
3. Rectifier

4.1.3. 24 V DC magnet wiring

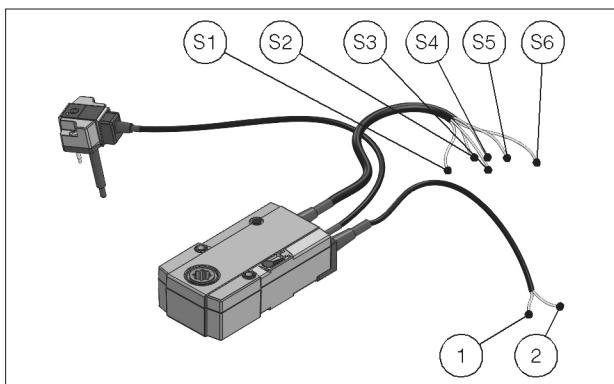

1. 24 V DC power supply
2. Magnet

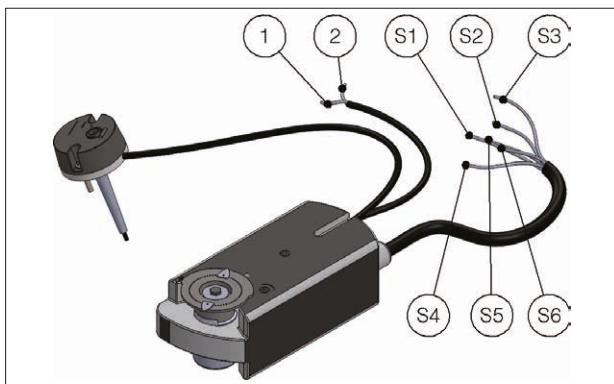

4.1.4. WK45 - Motorized version

Belimo servomotor:

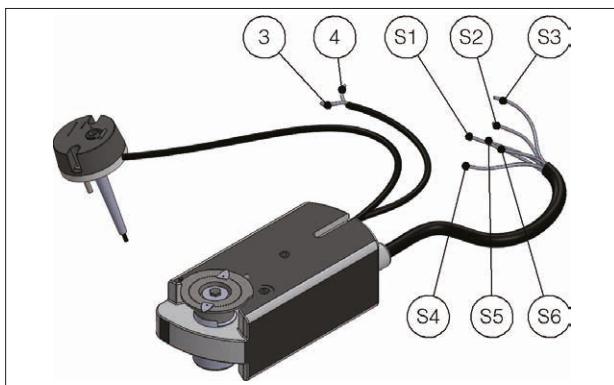

BFL24T, BFN24T, BF24T, BFL230T, BFN230T, BF230T.

Siemens servomotor:

GRA126, GNA126, GGA126.

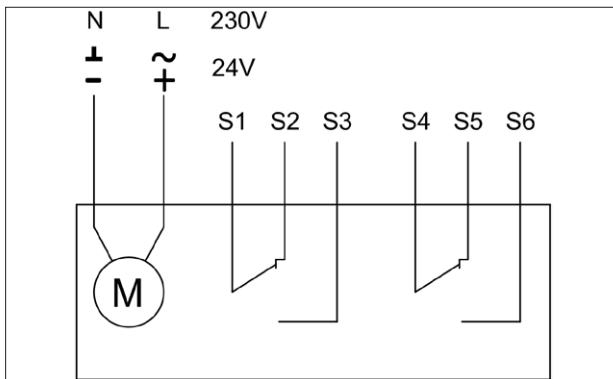

Siemens servomotor:

GRA326, GNA326, GGA326.

Motorized fire dampers electrical wiring

To connect the dampers to the power supply, proceed as follows:

- Check that the voltage and electrical frequency are equivalent to those of the motor of the servomotor (check the motor's information label);
- Make the connections as shown in the below diagram.

- | | |
|----|--|
| 1 | Negative (DC) or neutral (AC) |
| 2 | Positive (DC) or phase (AC) |
| 3 | Phase |
| 4 | Neutral |
| S1 | Common closed damper microswitch |
| S2 | Normally closed, closed damper microswitch |
| S3 | Normally opened, closed damper microswitch |
| S4 | Common open damper microswitch |
| S5 | Normally closed, open damper microswitch |
| S6 | Normally opened, open damper microswitch |

5. MAINTENANCE AND INSPECTIONS

Fire dampers and control mechanisms do not require routine maintenance.

Extraordinary maintenance (repairs) and periodic inspection operations are the responsibility of the ventilation system operator.

It is recommended to keep enough space (about 200mm) for using or replacing the control mechanism or for maintenance. Also provide the necessary space to remove the ventilation duct from the damper whenever necessary.

It is recommended to provide inspection hatches on both sides of the ducts connected to the fire damper.

The implementation of a periodic inspection plan allows to guarantee the efficiency and functionality of the fire dampers for the fire safety of the building.

5.1. Periodic inspection and cleaning

Periodic inspection shall be performed in accordance with the requirements of the law or by the building regulations or other local regulations.

In the absence of specific regulations (or to their complement), in accordance with point 8.3 of the EN 1560 standard, it is recommended to carry out the following control activities at intervals of no more than 12 months:

- Check the servomotor electrical wiring for damage (where applicable);
- Check end-switch wiring for damage (where applicable);
- Check damper cleanliness and clean where necessary;
- Check the condition of blades and seals, rectify and report where necessary;
- Check the correct opening and closing of the fire damper by manual operation according to the instructions in the technical manual of the fire damper;
- Check the opening and closing operation of the damper controlled by the fire alarm system (if present);
- Check the operation of the end switches in open and closed state, adjust and report if necessary;
- Confirm that the damper fulfils its function as part of the control system (where necessary);
- Check that the damper is left in its normal operating position, which usually corresponds to the open position.

5.2. Repair

For safety reasons, repair activities involving fire-fighting components must be carried out only by qualified personnel.

Only original spare parts supplied by the fire damper manufacturer must be used.

A functional test must be performed after each repair.

At the end of the inspection, cleaning or repair operations, check that the fire damper is in the normal operating position.

Keep records of all inspections, repair activities, any problems encountered and their resolution.

This practice, even when not mandatory, is very useful in practice.

5.3. Disposal

Disposal in case of destruction must be carried out in accordance with national legislation. For electrical and electronic parts also refer to EU Directive 2011/65.

6. SELECTION

6.4. Pressure drop and sound level graph for base 400 mm

Example

B = Base [mm]

B = 500

H = Height [mm]

H = 600

Q = Air flow [m^3/h]

Q = 4320 m^3/h

V1 = Frontal air speed [m/s]

V1 = 4 m/s

ΔP = Pressure drop [Pa]

$\Delta P = 0,83 \times 9,7 = 8$ Pa

Lw = Sound level [dB(A)]

Lw = 38 + 0,55 = 38,5 dB(A)

6.5. Correction for base different than 400 mm

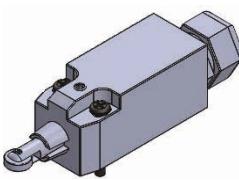

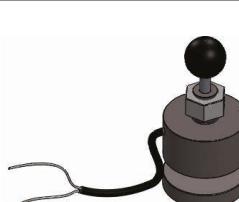

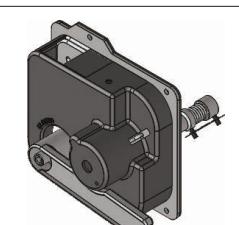

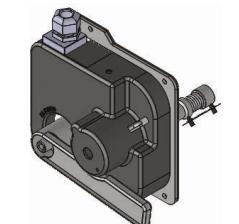

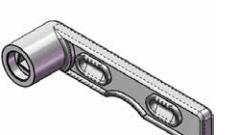

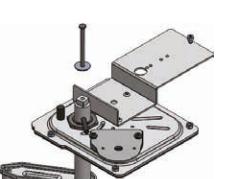

Correction for base different than 400 mm														
B in mm	200	250	300	350	400	450	500	550	600	650	700	750	800	850
$\Delta P \times \zeta \times ...$	1,65	1,40	1,23	1,10	1,00	0,87	0,83	0,80	0,77	0,75	0,73	0,71	0,69	0,67
Lw + ...	3,35	2,27	1,39	0,65	0,00	0,29	0,55	0,79	1,00	1,17	1,34	1,49	1,63	1,76
Correction for base different than 400 mm														
B in mm	900	950	1000	1050	1100	1150	1200	1250	1300	1350	1400	1450	1500	
$\Delta P \times \zeta \times ...$	0,66	0,64	0,63	0,62	0,61	0,60	0,59	0,58	0,57	0,56	0,55	0,55	0,55	
Lw + ...	1,89	2,00	2,11	2,22	2,32	2,42	2,51	2,60	2,69	2,77	2,85	2,93	3,00	

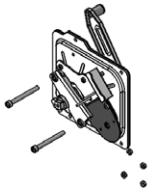

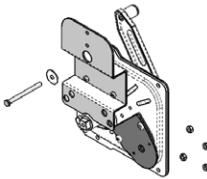

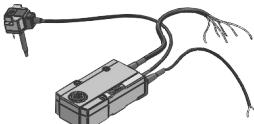

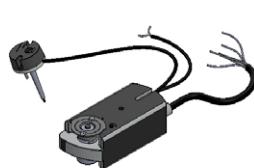

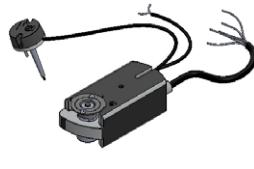

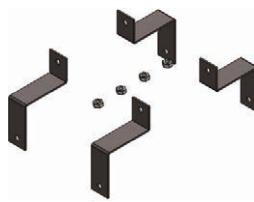

6.6. Sound spectrum table

Correction used to estimate the octave band spectrum (Values to be added to the noise levels in dB(A))

V1 (m/s)	F (Hz)							
	63	125	250	500	1000	2000	4000	8000
2	25	9	2	-4	-9	-17	-32	-19
3	20	8	1	-4	-8	-14	-27	-22
4	15	6	1	-4	-7	-11	-22	-24
5	11	5	0	-4	-6	-8	-18	-26
6	9	4	-1	-4	-5	-7	-15	-25
7	8	4	-2	-5	-5	-7	-14	-22
8	7	4	-3	-5	-5	-6	-13	-21
9	7	4	-3	-6	-5	-6	-12	-20
10	7	3	-3	-6	-5	-6	-12	-19

7. ACCESSORIES AND SPARE PARTS

	<u>Open blade microswitch</u> Closed blade microswitch (necessary according to UNI 10365, art. 4.9)	WHKICKIT WHKFCKIT
	Remote control magnet, optional for manual command fire dampers. Power supply input version: the fire WHKMA024KIT damper blade closes when power is supplied. Power supply 24 V DC - 4,5 W Remote control magnet, optional for manual command fire dampers. Power supply input version: the fire WHKMA230KIT damper blade closes when power is supplied. Power supply 230 V DC - 4,5 W - rectifier included	
	Remote control magnet, optional for manual command fire dampers. Power supply interruption version: WHKMG024KIT the fire damper blade closes when power is not supplied. Power supply 24 V DC - 4,5 W Remote control magnet, optional for manual command fire dampers. Power supply interruption version: WHKMG230KIT the fire damper blade closes when power is not supplied. Power supply 230 V DC - 4,5 W - rectifier included	
	WK45 manual mechanism with fuseholder group, cam, lever, protection box and 4 fixing nuts for B X H ≤ 600 X 300 WK45 manual mechanism with fuseholder group, cam, lever, protection box and 4 fixing nuts for B X H > 600 X 300	WK45MAN3 WK45MAN4
	WK45 manual mechanism with fuseholder group, cam, lever, protection box 4 fixing nuts and 1 microswitch closed damper for B X H ≤ 600 X 300 WK45 manual mechanism with fuseholder group, cam, lever, protection box 4 fixing nuts and 1 microswitch closed damper for B X H > 600 X 300	WK45MAN3CM WK45MAN4CM
	Red reset lever for WH/WK45 (spare part for manual mechanism) Blue reset lever for WH/WK45 (spare part for manual mechanism)	WHK45PLSLEVA WHK45PLSLEVAB
	Motorized plate WK45/43 for Siemens GGA + fixing screws (motor not included) Motorized plate WK45/43 for Belimo BF + fixing screws (motor not included)	WK45MTSG WK45MTB

	Motorized plate WK45/43 for Belimo BFN + fixing screws (motor not included)	WK45SMB
	Motorized plate WK45/43 for Siemens GNA / GRA + fixing screws (motor not included)	WK45MTSP
	Belimo motor for dampers predisposed for use with BFN24T / BF24T, 24 V AC/DC power supply, thermofuse 72 °C	BFN24T/BF24T
	Belimo motor for dampers predisposed for use with BFN24T-ST / BF24T-ST, 24 V AC/DC power supply, thermofuse 72 °C with connection plugs for control and monitoring systems	BFN24T-ST / BF24T-ST
	Belimo motor Top Line series for dampers predisposed for use with BF24TLT-ST, 24 V AC/DC power supply, BF24TLT-ST thermofuse 72 °C with connection plugs for control and monitoring systems	BF24TLT-ST
	Belimo motor for dampers predisposed for use with BFN230T / BF230T, 230 V AC power supply, thermofuse 72 °C	BFN230T / BF230T
	Siemens motor for dampers predisposed for use with GGA126 / GNA126 / GRA126, 24 V AC/DC power supply, thermofuse 72 °C	GGA126 / GNA126 / GRA126
	Siemens motor for dampers predisposed for use with GGA326 / GNA326 / GRA326, 230 V AC power supply, thermofuse 72 °C	GGA326 / GNA326 / GRA326
	Copper mechanical thermofuse 70 °C for manual mechanism	WK70
	Copper mechanical thermofuse 95 °C for manual mechanism	WK95
	Thermofuse 72 °C for Belimo motor BFL, BFN and BF (spare part)	WWEZBAT72
	Thermofuse 95 °C for Belimo motor BFL, BFN and BF (accessory)	WWEZBAT95
	Thermofuse 72 °C for Siemens motors GRA, GNA and GGA (spare part)	MT-FUSASK79.4
	Thermofuse 95 °C for Siemens motors GRA, GNA and GGA (accessory)	MT-FUSASK79.5
	Set of 4 brackets for plasterboard wall mounting + nuts	WKGY100
	Set of 4 plates for paired installation + screws + nuts	WKBA2

8. HOW TO ORDER

8.1. Motorized fire dampers

Code		
Type	WK	Rectangular fire damper
Series	45	Blade thickness 40 mm - 500 Pa air sealing
	VSS	Siemens motor GRA126 (24V)
	DSS	Siemens motor GRA326 (230V)
	VPS	Siemens motor GNA126 (24V)
	DPS	Siemens motor GNA326 (230V)
	VGS	Siemens motor GGA126 (24V)
	DGS	Siemens motor GGA326 (230V)
Motor type	VMB	Belimo motor BFN24T (24V)
	DMB	Belimo motor BFN230T (230V)
	TMB	Belimo motor BFN24T-ST (24V) with connection plugs for integration in control and monitoring systems
	VGB	Belimo motor BF24T (24V)
	DGB	Belimo motor BF230T (230V)
	TGB	Belimo motor BF24T-ST (24V) with connection plugs for integration in control and monitoring systems
Base	XYZ	Nominal base dimension (mm)
Height	XYZ	Nominal height dimension (mm)

8.2. Fire damper with manual control

Code		
Type	WK	Rectangular fire damper
Series	45	Blade thickness 40 mm - 500 Pa air sealing
Command type	B	Manual command
	M	Manual command with magnet
	S0	Without position microswitches (not recommended)
Position indication microswitches	SA	With open blade microswitch
	SC	With closed blade microswitch
	S2	With two microswitches
	M0	Without magnet (only for command type "B")
Magnet	MR	With power supply interruption magnet, 24 V DC
	MI	With power supply input magnet, 24 V DC
	MY	With power supply interruption magnet, 230 V AC
	MZ	With power supply input magnet, 230 V AC
Base	XYZ	Nominal base dimension (mm)
Height	XYZ	Nominal height dimension (mm)

Examples	Code
WK45 fire damper with manual control, without microswitch, without magnet, 400x450	WK45B-S0-M0-0400450
WK45 fire damper with manual control, with open blade microswitch, with 24 V DC power interruption magnet, 1500x800	WK45M-SA-MR-1500800
WK45 Siemens motorized 230V fire damper, 400x450	WK45DPS-0400450

9. SPECIFICATION TEXT

9.1. Series WK45 rectangular fire damper

Description

WK45 rectangular symmetric fire damper tested for fire resistance and smoke seal with 500 Pa depression (300 Pa for Weichschott sealing installations) as per EN 1366-2, classified according to EN 13501-3 and CE marked according to European Regulation UE 305/2011 and EN 15650 standard. Allows maximum safety for fire protection inside buildings providing perfect heat insulation and cold and hot smokes tightness. Can be connected to fire protection alarm system or smokes detection to anticipate blade closure before fire, prevents indirect damages caused by smokes generated by combustion.

Technical characteristics

- Available sizes from 200x200 mm to 1500x800 mm
- Bigger sizes achievable by pairing two fire dampers, only on vertical rigid wall as per EN 1366-2
- Case made from galvanized sheet steel, with a total length of 510 mm. Comes with flanges for duct connection 35 mm width with reinforced angle connections
- Closing mechanism built according to UNI 10365, with thermal fuse certified to ISO 10294-4, a test button to check the correct working of the damper, a release system to block the damper in closed position and a visual signal "open/closed". The closing mechanism can be easily interchanged and substituted:
 - with mechanical release and manual rearming
 - with mechanical release and manual rearming, can be released remotely via a magnet and electric and signal
 - with electric release and rearming, via and integrated Siemens or Belimo system tested according to EN 15650, composed by an electric thermal fuse and remote controlled servomotor via an electrical signal
- Blade made from calcium silicate insulating material
- Blade axis made of steel, patented fixing on casing, with low friction bearings for high reliability in case of fire.
- Silicon lip gasket to cold smoke sealing according to EN 1366-2
- Thermal, expanding graphite gasket
- Thermal fuse with melting point certified ISO 10294-4 at 70 °C or 95 °C (version with mechanical release) or at 72 °C (version with servo motor)
- Absence of thermal bridge between the wall of installation and the ducts before and after
- Resistance to salt spray, tested with severity 2, according to EN 60068-2-52
- Casing leakage Class C according to EN 1751

Installation

- Installation within vertical rigid walls made from aerated concrete blocks, standard concrete or masonry with a minimum thickness of 140 mm and minimum density of 500 kg/m³ (EI 180 S) or minimum thickness of 100 mm and minimum density of 500 kg/m³ (EI 120 S)

Mortar sealing (EI 180 S)

Mortar or plaster putty sealing (EI 120 S)

Plasterboard and rock wool 100 kg/m³ sealing (EI 120 S)

- Installation within light plasterboard walls with minimum thickness of 100 mm and simplified sealing with rock wool (EI 90 S) or with standard sealing with rock wool or simplified sealing with mortar or plaster putty (EI 120 S)
- Installation within light walls made with gypsum blocks 100 mm thick and minimum density 995 kg/m³ (EI 120 S) or minimum thickness of 70 mm and minimum density 995 kg/m³ (EI 90 S)
- Installation within concrete floors with a minimum thickness of 140 mm and minimum density of 2200 kg/m³ (EI 180 S) or aerated concrete with minimum thickness 150 mm and minimum density 650 kg/m³ (EI 120 S) or aerated concrete with minimum thickness 100 mm and minimum density 650 kg/m³ (EI 90 S)
- Installation with Fire Batt (Weichschott) sealing within vertical rigid walls made from aerated concrete blocks, standard concrete or masonry with minimum thickness 100 mm and minimum density 500 kg/m³, within light plasterboard walls with minimum thickness of 100 mm, within gypsum blocks light walls with minimum thickness 100 mm and minimum density 995 kg/m³ (EI 90 S)
- Installation with Fire Batt (Weichschott) sealing within concrete floors or aerated concrete with minimum thickness 150 mm and minimum density 650 kg/m³ (EI 120 S)
- Fire resistance characteristics independent from direction of the source of the fire according to EN 1366-2 article 6.2
- Installation possible with damper blade placed horizontally or vertically, with the mechanism placed in left/right or above/below

Accessories

- Motorised version with 24 V or 230 V servomotor installed on the damper
- Set of microswitches with four NO/NC position detecting connectors for open and closed damper, as per standard UNI 10365
- Immersion and interruption magnet 24 V DC or 230 V AC with rectifier
- Power supply and communication unit LonWorks, MP-Bus, Modbus, Bacnet
- Inspection doors diameter 140 mm with air sealing gasket, no tools required for opening
- Junction for circular ducts connection
- WKGY100 installation kit for plasterboard walls, comes with 4 shaped plates
- Fire damper pairing kit WKBA, comes with 4 shaped plates

www.lindab.com - Fire dampers are manufactured by MP3 Srl www.mp3-italia.it

As the manufacturer is constantly improving its products, the aesthetic or dimensional features, the technical data, the equipment and accessories indicated could be subject to variations.

Good Thinking

At Lindab, good thinking is a philosophy that guides us in everything we do. We have made it our mission to create a healthy indoor climate – and to simplify the construction of sustainable buildings. We do that by designing innovative products and solutions that are easy to use, as well as offering efficient availability and logistics. We are also working on ways to reduce our impact on our environment and climate. We do that by developing methods to produce our solutions using a minimum of energy and natural resources, and by reducing negative effects on the environment. We use steel in our products. It's one of few materials that can be recycled an infinite number of times without losing any of its properties. That means less carbon emissions in nature and less energy wasted.

We simplify construction
