

Damper with flow meter

FMDU

Description

Applications

The meter is suitable both for setting up and for continuous flow measurement. It is intended for permanent installation and must therefore be specified at the design stage.

There is a separate assembly, measuring, balancing and maintenance instruction for this product.

Ø 80–630 fulfills tightness class D and pressure class A.

Design

The meter consists of a regulating shutter and a centrally located measurement plate. Each measurement nozzle has a removable plastic plug which prevents dirt from entering. It also eliminates air leakage when measurement is not done.

The unit permits insulation of up to 50 mm thickness to be installed without concealing the measurement nipples or the label plate.

The plate can be rotated for best legibility, irrespective of the way the unit is installed and can easily be removed, to be located away from the unit. The cup around the damper knob allows insulation up to 50 mm thick to be used. If thicker insulation is needed, add the special insulation cup IK.

Advantages

- Short installation length.
- Suitable for use with insulation.

The unit has components which partly block the duct system.

Technical data

Flow graph for balancing

The curves show the flow, q , as a function of the pressure difference in the measurement nozzles. Flow data for dimensioning differs from this graph.

Measurement function

By measuring the pressure difference, D_p , between the measurement nozzles, you can derive the flow in the duct by means of the equation on the units plate.

Measurement accuracy

If the velocity profile is asymmetric, the measurement values can differ from the ideal values. For this reason, the flow meter should never be located right up to any flow disturbance. The method error in the table below will differ, depending on the distance to the flow disturbance.

l_1 = straight distance before meter	Method error m_2	
Type of disturbance	5%	10%
A 90° bend		
	$6 \cdot d_1$	$0 \cdot d_1$
A branch		
	$6 \cdot d_1$	$4 \cdot d_1$
l_2 = straight distance after meter	$1 \cdot d_1$	$1 \cdot d_1$

Damper with flow meter

FMDU

Pressure drop graphs with sound data for dimensioning

The solid lines show the pressure drop, Δp_t , across the unit as a function of flow, q . The dashed lines give the A-weighted sound power data, L_{WA} , in dB to the duct. Flow data for balancing differ from these graphs.
